# SPIoT

SPIoT (pronounced "spy-oat") is a cutting-edge device characterization and security auditing tool designed for the IoT environment. Utilizing active Bluetooth adapters and the PANalyzr SDR (sold separately), SPIoT delivers a comprehensive solution for IoT security assessments.

By integrating this hardware with our specialized front-end software and Bluetooth host and embedded stacks, we have developed an automated security audit test suite. This innovation significantly reduces the time required for manual testing and analysis.

PRODUCT SPECIFICTIONS

- Small, portable form-factor
- Intuitive user interface
- Selectable test cases
- Automated summary and reports

- General device characterization
- Advanced security and device audit
- Check for Common Vulnerabilities
- Advanced pen-testing tools
