Primer

Intelligent search with fluent answers

Challenge

Enterprises have a search problem. Sifting through vast amounts of data to find relevant, context-rich insights is time-consuming and hinders productivity and decision-making.

Solution

Primer's powerful search function addresses this challenge by understanding user intent and context, providing accurate and personalized search results. Users can query in everyday language and receive fluent, fully sourced AI-generated answers, streamlining the search process and boosting efficiency.

Trusted, explainable results

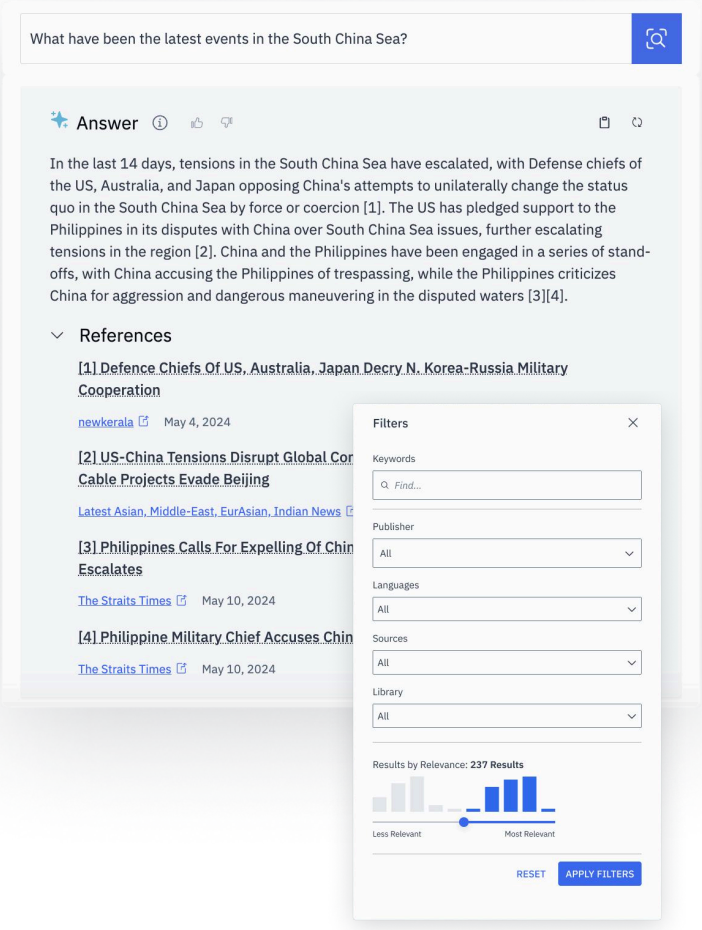

Receive accurate and cited answers by anchoring results to trusted enterprise data stores, reducing hallucinations of large language models.

Richer search results

Get context-aware search results. Primer pre-processes your documents, extracting key information and representing it in a knowledge base to further enhance search results.

Refine search, your way

Hone in your search results with advanced filters, narrowing your focus by data type, time period, publisher, relevance, language, and more.
