

Fortis Insolvency

Founded in 2015, Fortis Insolvency is a Manchester-based firm delivering corporate and personal insolvency services across the UK. To modernise its operations, the firm moved from SQL to IPS Cloud, improving automation, flexibility, and case visibility.

Challenge and solution

Fortis Insolvency had been using SQL for over 20 years, but as a small team, moving to a new system posed time and resource challenges. Understanding requirements, planning the migration, and minimising disruption were key concerns. The IPS Cloud Migration Report proved pivotal, helping the team identify priorities and focus on the most critical tasks. With support from Turnkey, Fortis Insolvency successfully transitioned to Turnkey IPS, benefiting from flexible workflows, automation, and customisable dashboards. Features such as structured task functionality and faster document access improved day-to-day efficiency, while training and in-app guidance ensured smooth adoption and confident system use.

Results & Benefits

Improved automation and workflow efficiency

Greater flexibility and product customisation

Enhanced visibility through dashboards and reporting

Faster onboarding and user confidence through training and support
