Connection Guide

Bluetooth Connection

The name "BGM SYSTEM" is shown on the mobile device for pairing.

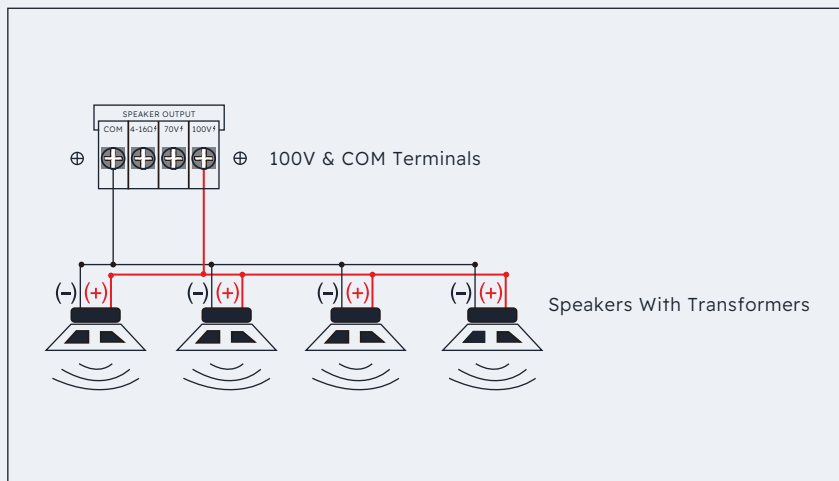

Connection Guide

This amplifier has multiple loudspeaker outputs, including 100V, 70V, and low impedance (4-16Ω).

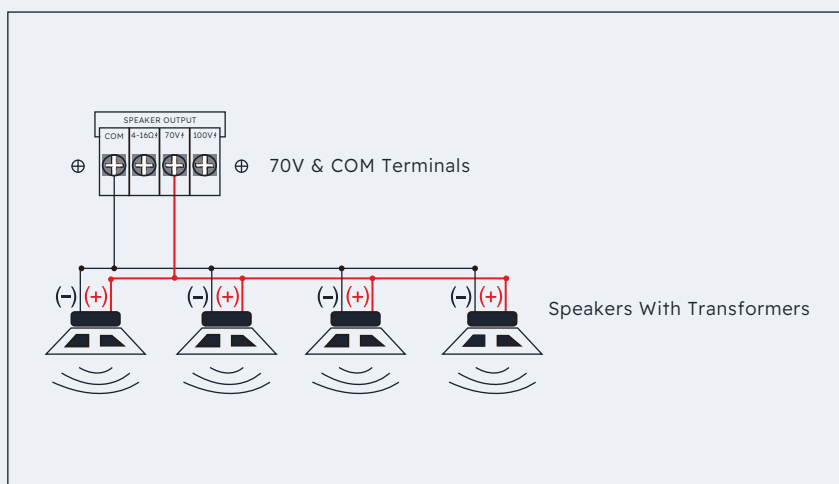

100V Line Output

Use only 100V line loudspeakers with transformers, connected in parallel. Ensure the total load does not exceed the amplifier's rated output, and limit usage to 70% of rated power for optimal performance with music sources.

70V Line Output

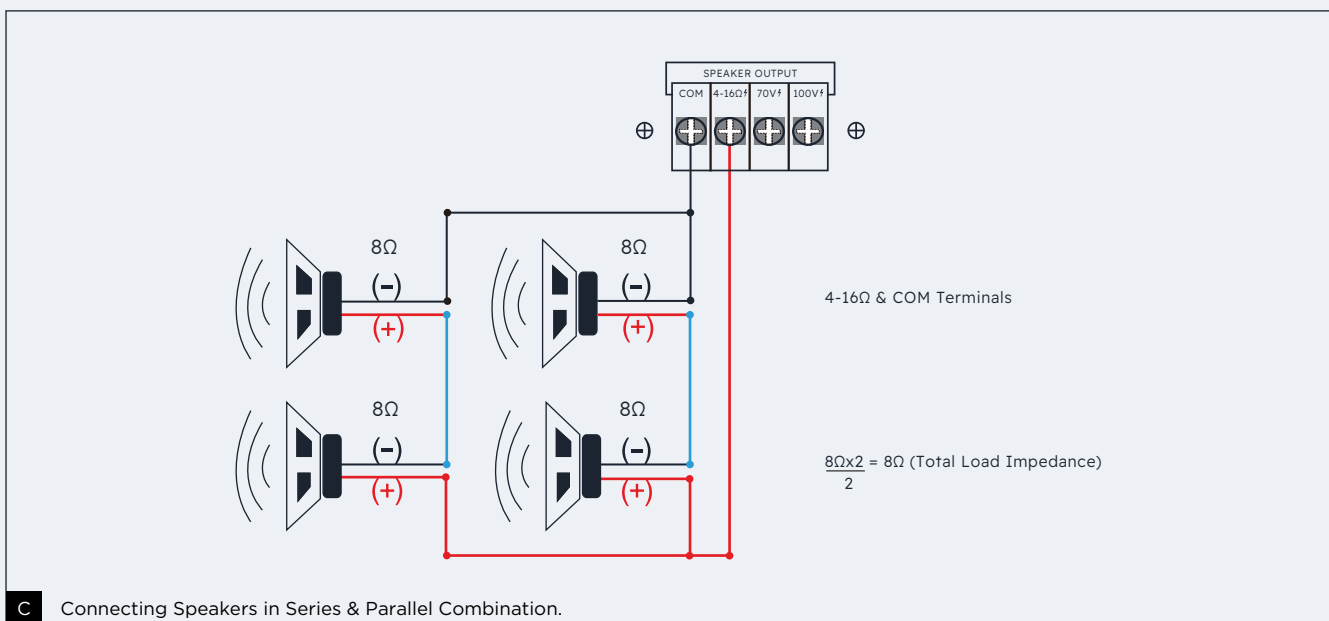

This system, commonly used in the USA, operates on the same principles as a 100V line system, but delivers 70V RMS at the amplifier's output terminals when operating at rated power.

Connection Guide

4-16Ω Low Impedance Output

This output allows the connection of low-impedance loudspeakers without the need for transformers. When using multiple loudspeakers, ensure they are wired in series, parallel, or a series-parallel combination so that the total load impedance remains between 4Ω and 16Ω.

Hazard/Warning Note

	<p>The exclamation mark in an equilateral triangle alerts users to important safety instructions in the user manual. Please read carefully.</p>
