Water in the landscape May 16, 2019

Too much

Too little

Water in the Landscape on purpose

Water in the landscape not on purpose

- 'House is at foot of hill, spring rains produce runoff that ruins my flower beds, undercuts driveway. Hill isn't on my property, can only control runoff once it reaches my yard. I repair damage, happens the next spring. Neighbor isn't willing to do anything to water running off his yard'.
- What can I do to stop this?
- Two goals:
- One: divert water to stop damage to your property
- Two: slow down water so it percolates into soil instead of running off
