

FROM REPORTS TO RESULTS

STOP MANAGING IN THE REARVIEW MIRROR.

Your RealGreen data shouldn't just explain what happened. It should tell you what to do next — before you lose revenue.

THE REALITY OPERATORS FACE

BUSINESS INTELLIGENCE

What Already Happened
You run a report and see:

- ⊗ No Services (skips) increased 15% last month
- ⊗ One route is driving most of your unbilled stops
- ⊗ Revenue per man-hour dropped 12%

But by the time you see it...
You're already behind. You've already lost the margin.

BI shows you problems.
IT DOESN'T SOLVE THEM.

DECISION INTELLIGENCE

What to Do Before It Costs You
Before callbacks spike:

- ✔ At-risk routes are flagged early
- ✔ Technician production variance is surfaced
- ✔ Customers likely to cancel (Stop-Loss) are predicted before they call

Managers get alerts early
— not after revenue is lost.

DI DOESN'T JUST INFORM.
IT INTERVENES.

THE 2 LEVELS OF OPERATOR CONTROL

LEVEL 1 ASSISTED DECISIONS

System surfaces which techs, routes, or services are driving skips

YOU DECIDE WHAT TO CHANGE TO PROTECT THE DAY'S REVENUE.

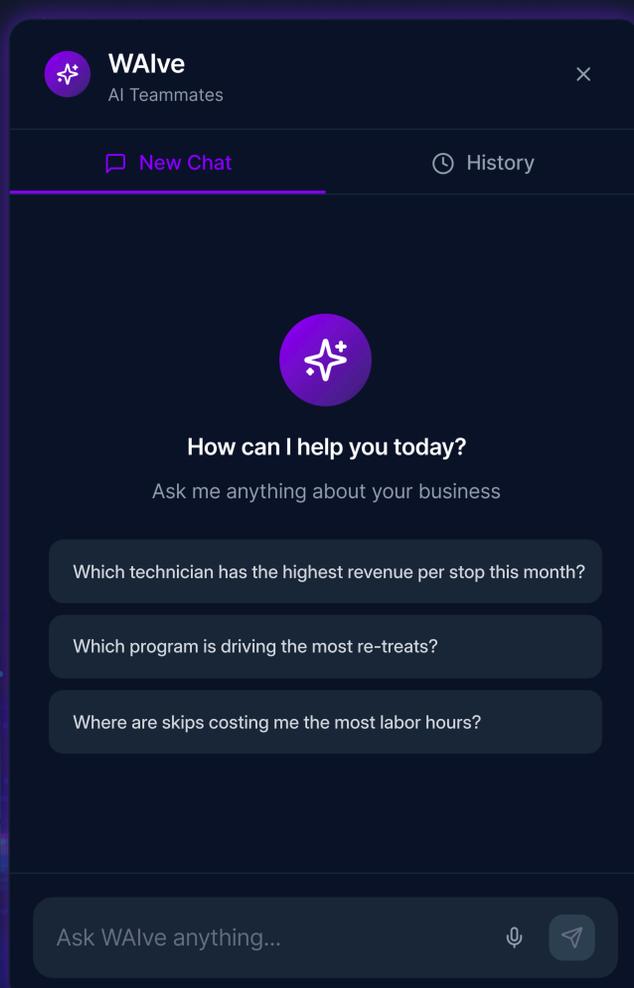

LEVEL 2 PROACTIVE ALERTS

The system detects abnormal callback patterns in near real time.

YOU DECIDE WHAT TO RESCHEDULE before storms disrupt routes.

ARE YOUR OPERATORS PULLING 5 DIFFERENT REPORTS?

ASK WAIVE™

**INSTANT ANSWERS.
NO SPREADSHEET ARCHAEOLOGY.**

WHAT THIS MEANS FOR YOU

FEWER WASTED TRUCK ROLLS.

HIGHER TECHNICIAN ACCOUNTABILITY.

STRONGER ROUTE PROFITABILITY.

MORE PREDICTABLE MARGIN.

RUN YOUR OPERATION LIKE A CONTROL TOWER — NOT A CLEANUP CREW.
