

FOR SALE

COMPLETE PACKAGE OF (30) ABB INDUSTRIAL ROBOTS

PROJECT DESCRIPTION

This offering represents an excellent opportunity to acquire a substantial, homogeneous fleet of heavy-payload robots at short notice. The IRB 6640 is one of ABB's most established platforms for high-payload material handling and spot welding applications, known for its rigidity, repeatability, and long service life in demanding industrial environments. All 30 units are built to the same specification and available from a single location.

The robots have been in continuous industrial use and are offered in tested, fully operational condition, complete with their original controllers and teach pendants, ready for reinstallation or export. Additionally, a spot welding unit is included with each robot, making it a fully equipped, ready-to-use spot welding robot for automotive and other applications.
