

Two-month pilot: digital freight documents in daily operations

Shorter waiting times and fewer manual clarifications with digital eCMR, ADR, eFTI, DIWASS, ESG reporting and automated notifications with real-time status for sender and recipient, all on a shared data foundation.

Purpose and scope

We test and operationalise full digitisation of freight and transport documents in the Peppol format, with direct impact in daily operations. It is a pilot: it uncovers the opportunities and challenges, so the benefits of eFTI can be scaled and harvested.

Success criteria

The business case shows at least **25% less manual work** (fewer clarifications, less paperwork).

The pilot shows at least **25% shorter waiting times** in the scoped processes, and real-time notifications work as intended.

PILOT ACTIVITIES

Phase 1

2–3 weeks

Phase 2

3 weeks

Phase 3

2 weeks

Mobilisation and setup

Introduction to Peppol. Configuration of the Semantic API and eFTI automation. Identification of eFTI use cases and business opportunities.

Testing and data collection

eFTI compliance testing and pilot data collection. High-level mapping of current processes.

Business case and roadmap

Documentation of pilot experiences. High-level business case, roadmap from pilot to scaling and targets for compliance.

DELIVERABLES

Setup and configuration of the Semantic API
Validation, semantic mapping and ensuring eFTI compliance
Automatic eFTI reporting to authorities
Documentation of data flows, setup and pilot experiences
Mapping of current processes (phase 2)
High-level business case and roadmap (phase 3)

ORGANISATION

Joint steering committee approves the project's deliverables
Semantic project manager is responsible for progress and deliverables
Joint project team covering data, documentation and workshops

YOUR RESOURCES

Phase 1: process owner (10 hours) and IT lead/architect (20 hours)
C-level joins steering committee meetings. Phases 2–3 to be agreed.

DURATION

2 months

PILOT FEE, PHASE 1

DKK 50,000

PHASES 2–3

DKK 75–125,000

Fees in DKK excl. VAT. Applies to hauliers with their own TMS (integration via the Semantic API) as well as freight forwarders connecting customers and subcontracted carriers on the same data foundation.
