

Lightweight drinking system hydration solution for use during racing

The lightweight drinking system was developed by engineers, tested in race conditions, and built for professional use. Weighing only 865 grams and featuring a 1-litre bottle, it offers a well-designed, vehicle-independent hydration solution for use during racing.

Mounted via a lightweight carbon bracket, it provides a true plug-and-play solution for a wide range of vehicle types. The quick-release bottle system allows for rapid changes during pit stops, while a cleaning kit and custom transport case ensure long service life and hygienic operation.

Lightweight drinking system

Features

- Plug & play and universal packages available
- Push-Button steering wheel
- Holder for roll-cage or chassis mounting
- Quick-Change Bottle Mount
- Quick-Release Helmet Connection
- 4 m PVC Tubing with Armaflex Insulation

Technical data

WEIGHT	856 g
BOTTLE VOLUME	1 Litre
LOAD-CURRENT	320 mA @ 12V
FLOW RATE	1.1 L/min
PUMP LIFE	3.000 hours
