

Water filling device for cooling systems

Suction, evacuation and filling – all in one device.

The water filling device is the professional complete solution for suction, evacuation and filling of cooling systems in road and motor sports vehicles. It works precisely according to manufacturer specifications and enables efficient, clean and safe filling – without any air pockets.

Thanks to its intelligent adapter concept, the device can be used on vehicles of all makes – from production vehicles to racing cars. All you need is a suitable adapter to connect the system perfectly to the respective model.

Water filling device

Features

- All-in-one solution (suction, evacuation and filling)
- Suitable for road and motor sports vehicles of all brands
- Space-saving and robust transport case
- Large tanks (integrated separation tank for evacuation)
- Hose connections with shut-off couplings
- 5 metre 230V connection cable (with automatic reel)
- Tank capacity: 32 litres
- Max. pump capacity 3.5 bar; 12 l/min.
- Tank capacity of separation tank: 4 litres
- Max. achievable vacuum: -0.9 bar
