

Domestic Warehousing

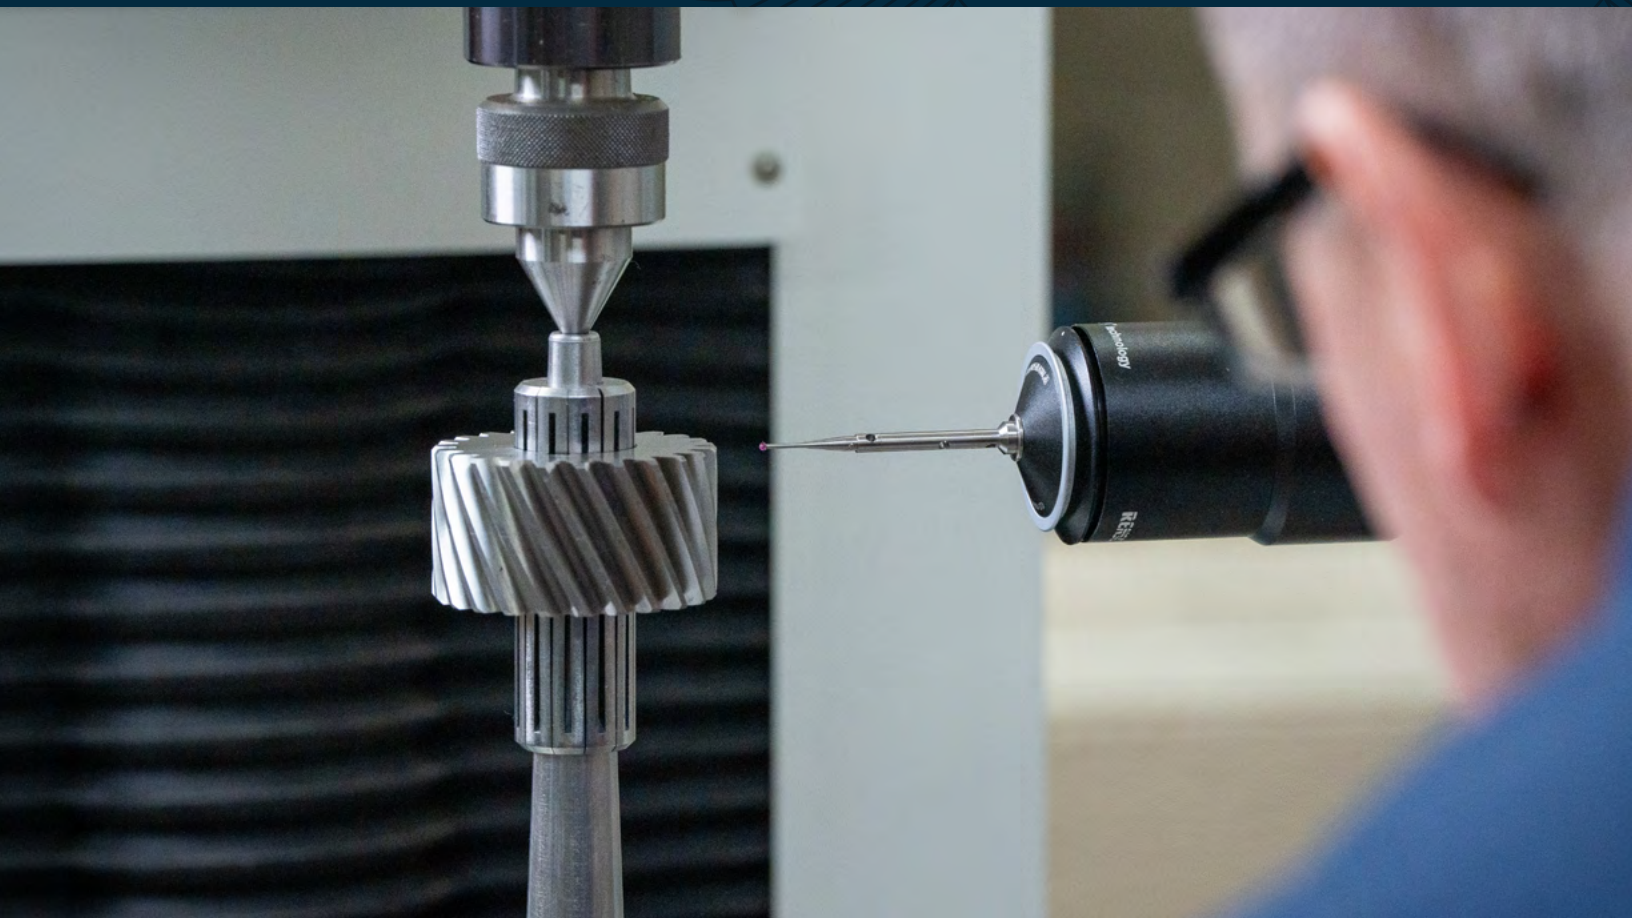

Global Sourcing

Custom Components

Precision parts for industrial motion.

A global platform of specialized gear manufacturers and suppliers.

Vector Companies is a platform of industrial motion control and power transmission component manufacturers. Through our brands The Adams Company, Atlas Gear Company, Atlas Global, and Northend Gear & Machine, global innovators can leverage our 300+ years of combined manufacturing expertise, with resources for low-volume, high-volume, and custom gear manufacturing capabilities from a single source.

Partnering with innovators to deliver for customers and drive global product development forward.

Mission

Support global
innovation with
industrial motion control
and power transmission
component resources.

The Adams Company

Production Gear & Shaft Manufacturer

The Adams Company partners with OEMs for production machining of gears, shafts, and motion control components. Since 1883, we deliver consistent quality, tight tolerances, and dependable lead times at scale for critical applications across industrial markets.

Atlas Gear Company

Specialty Gear & Shaft Manufacturer

Atlas Gear Company specializes in small volume custom and prototype parts, crafting precision bevel, spur, helical, crown, internal helical, and worm gears. We collaborate with engineers to validate designs, prove manufacturability, and accelerate preproduction timelines.

Atlas Global

Global Sourcing of Gearbox Components

Atlas Global imports power transmission components and assemblies, performs rigorous inspections, and manages inventory through domestic warehousing. We streamline supply chains with quality assurance, forecasting support, and managed inventory programs that keep production running lean and costs predictable.

Northend Gear & Machine

Large Gearbox Manufacturing & Service

Northend Gear & Machine specializes in large-diameter gears and heavy shafts, precision wire EDM, and full gearbox repair and remanufacturing. We diagnose root causes, reverse-engineer parts, and deliver tight-tolerance rebuilds that restore performance, reliability, and uptime for demanding industrial applications.
