## INTRODUCCIÓN

### LA ENCUESTA DE ESTABLECIMIENTOS

La División de Estadísticas sobre Empleo forma parte del Negociado de Estadísticas del Trabajo del Departamento del Trabajo y Recursos Humanos. Ésta división está a cargo de la realización de la **Encuesta de Establecimientos (EE)**, la cual se realiza mensualmente para estimar el nivel de empleo asalariado no agrícola, salarios y horas trabajadas por sector industrial.

La Encuesta de Establecimientos es un estudio que forma parte del programa **Current Employment Statistics (CES)** del Negociado de Estadísticas del Trabajo del Departamento del Trabajo Federal, el cual produce toda la metodología utilizada para la selección de muestra, la recolección de datos y el proceso de estimación. Además, ofrece asesoramiento técnico y validación a la encuesta.

La EE se realiza a base de las nóminas de alrededor de 4,500 establecimientos que componen la muestra seleccionada para esos fines. El listado **QCEW-202**, informe que contiene el universo de patronos con empleados asalariados en la isla, sirve de marco de referencia de la encuesta y de él se seleccionan los establecimientos que formarán parte de la muestra. Éste informe es una lista de todos los patronos que rinden contribuciones al Seguro por Desempleo, según el cual hay alrededor de 48,500 establecimientos cubiertos por la ley para el tercer trimestre del 2014. Existen ciertas categorías de establecimientos que están exentos y no son cubiertos por esta ley. El empleo no cubierto de estos establecimientos es estimado por otros métodos alternos como parte del proceso de determinación del punto de partida o “Benchmark”.

La muestra utiliza el modelo de muestreo probabilístico, la cual garantiza la representación adecuada del universo de empresas no agrícolas a través de técnicas de selección aleatorias.

Está estratificada por grupo industrial y tamaño, con el objetivo de ser representativa de cada una de las clasificaciones industriales siguiendo las definiciones del Manual “North American Industry Classification System” (NAICS), Edición Revisada de 2012. Los grupos industriales, a su vez, están divididos en celdas o subgrupos, de acuerdo a la necesidad de información existente o para hacer más manejable el estimado de aquellos grupos grandes.

El empleo total asalariado no agrícola en Puerto Rico se estima a base del total de empleados reportados por los patronos de la muestra que trabajaron o recibieron paga en el periodo de nómina que incluye el día 12 de cada mes. Con estos datos se analiza el cambio porcentual registrado de mes a mes. Para ello, se utiliza el estimador racional conocido como “Enlace Relativo Ponderado”, en donde se le aplica un peso (valor) a cada unidad de la muestra en el proceso de estimación. Asumiendo que la muestra es representativa de la población, se infiere que los cambios observados en ella constituyen un instrumento confiable para estimar los cambios en los niveles de empleo de la población de establecimientos con empleo asalariado en Puerto Rico.

La EE está considerada como el instrumento más preciso para la medición del empleo por sector industrial en los Estados Unidos y Puerto Rico.

## REVISIÓN ANUAL DE ESTIMADOS DE EMPLEO ASALARIADOS

Todos los años, los estimados de empleo por sector industrial de la EE son sometidos a un proceso riguroso de revisión. El método de revisión consiste en la determinación de un punto de partida o “**benchmark**” en el nivel de empleo que sirve de base para la re-estimación del empleo asalariado. Esto es, antes de estimar el nivel de empleo por sector para el mes de enero de cada año, se establece un nivel de empleo revisado para el año anterior, que sirve como punto de partida para la revisión. A partir de ese nivel de empleo revisado, se producen nuevamente los estimados de los meses subsiguientes. Cada uno de estos estimados revisados está sujeto a un proceso de escrutinio para identificar errores, omisiones y otras particularidades que puedan pasar inadvertidas.

## **DIFERENCIAS CONCEPTUALES ENTRE LA ENCUESTA DE GRUPO TRABAJADOR Y LA ENCUESTA DE ESTADÍSTICAS SOBRE EMPLEO ASALARIADO NO AGRÍCOLA**

La información para la encuesta de Grupo Trabajador se obtiene a través de visitas a una muestra de hogares, mientras que la de Empleo Asalariado No-Agrícola se obtiene directamente de las nóminas de establecimientos industriales. La encuesta de Grupo Trabajador cubre personas en todo tipo de empleo asalariado, empleo por cuenta propia y familiares sin paga, incluyendo en la agricultura. Sin embargo, la encuesta de establecimientos considera únicamente los empleados en las nóminas de establecimientos no agrícolas.

En la encuesta de Grupo Trabajador una persona se cuenta una sola vez, independiente al número de trabajos que tenga: no así en la encuesta de establecimientos donde puede ser contado en los diferentes establecimientos en que trabaje.

La encuesta de Grupo Trabajador estudia la situación de empleo y desempleo de las personas de 16 años y más dentro de la población civil no institucional. En la encuesta de establecimientos pueden ser contados militares que estén empleados civilmente.

Finalmente, la encuesta de establecimientos utiliza el Manual “North American Industry Classification System: 2012” para agrupar el empleo por industria. La encuesta de Grupo Trabajador, toma la información que ofrezca el entrevistado. Por este motivo se recomienda al usuario el estimado de empleo clasificado por industria, de la encuesta de establecimientos.

A continuación se presentan las tablas y gráficas correspondientes a las series históricas de empleo asalariado no agrícola desde el 1990 hasta el 2014, sin ajustes estacionales. Las mismas incluyen los totales de empleo para Puerto Rico en los 10 grupos industriales principales y los diferentes subgrupos de cada industria, así como en las 7 áreas estadísticas metropolitanas.
