## **NOTA DE AGRADECIMIENTO Y RECONOCIMIENTO**

Deseamos agradecer a las siguientes personas y oficinas la ayuda recibida en la preparación de este Informe. Extendemos un agradecimiento especial a:

### **DEPARTAMENTO DE SALUD**

#### **Oficina de Desarrollo de Sistemas de Información**

Sr. Pedro Valcárcel – Director  
Sra. Yolanda Viera – Directora de Programación Sistemas Electrónicos  
Sra. Olga Valentín – Directora Análisis  
Sra. Damaris Santiago – Analista de Sistemas  
Sra. Olga Ríos – Oficinista de Control  
Sra. Lydia Rosado Oficinista de Control  
Todo el personal de ODSI

#### **Registro Demográfico de Puerto Rico**

Sr. José A. Torrado, M.S. – Director, Registro Demográfico  
Sra. Leonides Rosado, M.P.A. – Subdirectora, Registro Demográfico  
Todo el personal de codificación, Revisión, Control de Documentos, Entrada de Datos, Asuntos Legales, Pareo, Búsqueda, Microfilmación, Registradores Locales y Regionales.

### **UNIVERSIDAD DE PUERTO RICO**

#### **Programa Graduado de Demografía, Escuela de Salud Pública, Recinto de Ciencias Médicas:**

Dra. Zoraida Morales, - Catedrática  
Dra. Ana Luisa Dávila – Catedrática  
Prof. Judith Rodríguez Directora, Depto. De Ciencias Sociales  
Prof. Severo Rivera – Catedrático Asociado

### **JUNTA DE PLANIFICACION DE PUERTO RICO**

Sra. Norma E. Burgos Andujar, Presidenta, Junta de Planificación  
Sra. Lillian Torres Aguirre – Directora, Oficina del Censo  
Sr. José Luis Jiménez – Analista de Planificación

---

# Introducción

## **INTRODUCCION**

Comenzando con los datos de 1996, el Informe Anual de Estadísticas Vitales será publicado en dos volúmenes en un esfuerzo por mejorar cada vez nuestras publicaciones y así proveer y presentar datos de forma mas manejable. El contenido de cada volumen será el siguiente:

Volumen 1 Datos de nacimientos, población, matrimonios y divorcios.

Volumen 2 Datos de mortalidad (general, causas externas, infantil, materna y fetal)

Esta publicación contiene información sobre la mortalidad en Puerto Rico ocurrida para 1996. Su propósito es proveer información sobre la Mortalidad General, Muertes por Causas Externas, Mortalidad Infantil, Muertes Maternas y Mortalidad Fetal a la gran variedad de usuarios que hacen referencia a estos datos.

El Registro de Defunciones de Puerto Rico es uno completo. Todas las causas de muerte en los certificados de defunción son certificadas por médicos. El 52 por ciento de las defunciones son certificadas por los médicos de cabecera, 37 por ciento por los médicos basados en resultados de autopsia y expedientes o evidencia médica y el restante 11 por ciento es certificado por médicos utilizando otras fuentes.

La entrada de datos de defunción al computador se hace directamente en los registros demográficos locales. De allí se envían electrónicamente al Centro de Cómputos del Departamento de Salud, ubicado en la Oficina de Desarrollo de

Sistemas de Información (ODSI). Al llegar al Centro de Cómputos se realizan pruebas de consistencia y se depuran los datos.

El Centro es custodio de los datos que se mantienen en medios electrónicos; y además, vela por la seguridad del sistema de defunciones. En el Centro de Cómputos se diseñan los sistemas y los programas para editar los datos, se verifican las consistencias, se cuadran y se producen las tabulaciones.

Además, se producen los datos requeridos por el Centro Nacional de Estadísticas de Salud y otras agencias gubernamentales tanto locales como federales. Se producen índices mensuales e informes y tablas estadísticas para diferentes usuarios y propósitos.

Las tabulaciones que se producen en el Centro de Cómputos son enviadas a la División de Estadísticas de la Secretaría Auxiliar de Planificación, Evaluación, Estadísticas y Sistemas de Información donde se cotejan, se analizan y se preparan las publicaciones.

# Datos Sobresalientes

## **DATOS SOBRESALIENTES**

Para 1996 en Puerto Rico ocurrieron 29,871 muertes.

- ↳ 17,334 fueron varones y 12,537 fueron hembras.
- ↳ 8,735 fueron muertes por enfermedades cardiovasculares.
  - ↳ 5,925 por enfermedades del corazón
  - ↳ 1,465 por enfermedades cerebrovasculares
  - ↳ 1,084 por hipertensión
  - ↳ 261 por arterioesclerosis
- ↳ 4,563 muertes fueron por tumores malignos, (cáncer)
  - ↳ 1,867 fueron hembras
  - ↳ 2,696 fueron varones
    - ↳ 649 cáncer de mama
    - ↳ 535 cáncer de próstata
- ↳ 2,091 fueron por diabetes.
- ↳ 665 fueron muertes infantiles.
- ↳ 11 fueron muertes maternas.
- ↳ 1,474 fueron por el VIH/SIDA
  - ↳ 1,106 fueron varones
  - ↳ 368 fueron hembras
- ↳ 1,520 ocurrieron como resultado de accidentes y violencia incluyendo:
  - ↳ 331 suicidios
  - ↳ 928 homicidios

## **MORTALIDAD GENERAL**

Las Enfermedades del Corazón y los Neoplasmas Malignos (Cáncer) fueron las dos principales causas de muerte, responsables en conjunto del 35.1 por ciento (10,488) del total de defunciones. Las Enfermedades del Corazón continúan siendo la primera causa de muerte. Unas 5,925 personas murieron por esta causa en este período y para 1995 murieron 5,941 personas por esta misma causa.

Las Enfermedades Cardiovasculares (incluyendo aquí las enfermedades del corazón, cerebrovasculares, hipertensión y arterioesclerosis) causaron 8,735 muertes, lo que equivale al 29.2 por ciento del total de muertes ocurridas.

Los Tumores Malignos (Cáncer) ocuparon el segundo lugar de las causas de muerte con 4,563 muertes, para un 15.3 por ciento del total de las muertes.

Entre las hembras hubo un total de 1,867 muertes por Cáncer. El Cáncer de los Organos Digestivos y Peritóneo fue la primera causa de muerte en las hembras con 602 muertes, seguido del Cáncer de la Mama con 349 muertes.

Entre los varones hubo 2,696 muertes por Cáncer, siendo el más frecuente el Cáncer de los Organos Digestivos y Peritóneo con 928 muertes; le sigue el Cáncer de la Próstata con 535 muertes.

La Diabetes Mellitus ocupó el tercer lugar, (el cual ha retenido desde 1989). Debido a esta causa murieron 2,091 personas, o sea, el 7.0 por ciento del total de muertes en 1996. En el año 1995 causó 2,216 muertes, lo que representa 125 muertes más que en 1996.

Para 1996, la causa de muerte que ocupó el cuarto lugar fueron los Accidentes con 1,520 muertes equivalentes al 5.1 por ciento del total. Esta causa también ocupó el cuarto lugar para 1995 con 1,529 muertes, lo que significó 9 muertes más que para este año.

La quinta causa de muerte lo fue la Infección por el Virus de Inmunodeficiencia Humana, virus causante del Síndrome de Inmunodeficiencia Adquirida (SIDA). Se informaron 1,474 muertes; de las cuales 1,106 fueron varones y 368 fueron hembras. Esta causa ocupó el sexto lugar para 1995 y causó 1,398 muertes.

El sexto lugar lo ocupan las Enfermedades Cerebrovasculares con 1,465 muertes. Esta causa ocupó el quinto lugar en 1995 con 1,474 muertes.

El séptimo lugar lo ocupa este año la Enfermedad Pulmonar Obstructiva Crónica, (COPD por sus siglas en Inglés). Esta causó 1,248 defunciones (4.2%).

La Neumonía e Influenza fueron la octava causa de muerte para este año, causando 1,174 (3.9%) muertes. En 1995 esta causa ocupó el séptimo lugar causando 1,352 muertes (4.5%).

Las Enfermedades Hipertensivas ocuparon el noveno lugar con 1,084 personas fallecidas por esta causa, (3.6%). Para 1995 esta causa ocupó este mismo lugar y causó 1,062 muertes.

Los Homicidios e Intervención Legal ocuparon el décimo lugar. Un total de 928 personas (3.1%) murieron por esta causa durante el año 1996. Esta causa también ocupó este mismo lugar para 1995 y causó 928 muertes también.

Las Enfermedades del Hígado y Cirrosis y Septicemia fueron las causas que ocuparon el undécimo y el duodécimo lugar. Se registraron 670 (2.2%) y 634 (2.1%) defunciones respectivamente.

La Nefritis y Nefrosis y las Enfermedades Originadas en el Período Perinatal ocuparon el decimotercero y decimocuarto lugar, respectivamente. La Arterioesclerosis fue la causa número quince por la cual fallecieron 261 personas.

### **MUERTES POR CAUSAS EXTERNAS**

Las muertes por causas externas o muertes violentas incluyen accidentes, suicidios y homicidios.

Las muertes ocurridas por accidentes (todo tipo) para 1996 fueron 1,520 con una tasa de 40.7 por cada 100,000 habitantes. Para 1995 ocurrieron 1,529 muertes por accidentes; nueve (9) muertes por accidentes más que para este período (1996). El mes de septiembre fue el mes cuando más muertes por accidentes se reportaron con 151 fallecimientos.

El mayor número de homicidios reportado se encuentra entre las edades de 20-24 años. La cifra total fue de 253 muertes por homicidio. Los suicidios reportados para este período fueron 331.

## **MORTALIDAD INFANTIL**

En el análisis de los datos de los certificados de defunción de menores de un año, observamos para el año 1996 la tasa de mortalidad infantil fue de 10.5 por cada 1,000 nacimientos vivos (665 muertes infantiles entre 63,549 nacimientos vivos ocurridos). Se reportaron 144 muertes infantiles menos que en el 1995 (809 muertes infantiles).

Entre las 665 muertes de menores de un año ocurridas en Puerto Rico para 1996, unas 501 muertes ocurrieron en el período neonatal (menores de 28 días de vida) y 164 ocurrieron en el período postneonatal (desde los 28 días, pero sin lograr alcanzar su primer año).

Todas las regiones de salud mostraron una disminución en la tasa de mortalidad infantil excepto la Región de Mayaguez que reflejó un aumento para 1996. La Región de Mayaguez tuvo la tasa de mortalidad infantil más alta (12.3) mientras que en las demás Regiones la tasa de mortalidad infantil disminuyó entre 1995 y 1996. En la Región de Arecibo se registró la tasa de mortalidad infantil más baja para 1996; esta fue de 7.5 muertes por cada 1,000 nacimientos vivos.

## **MORTALIDAD FETAL Y MATERNA**

Para este año 1996 se informaron 708 muertes fetales, lo que representa una tasa de 11.1 por cada mil nacidos vivos. La mortalidad fetal para 1996 aumentó en 58 muertes con relación a las muertes fetales reportadas para 1995 (650 muertes con una tasa de 10.1 por cada mil nacidos vivos).

El mayor número de muertes fetales se registró en el municipio de San Juan con 85 casos, seguido del municipio de Bayamón donde se reportaron 55 muertes fetales.

Durante este período (1996) se reportaron 11 muertes maternas. De este total dos de estas muertes ocurrieron en el municipio de San Juan.

En el grupo de edad de 35-39 años se reportaron tres (3) muertes maternas, siendo éste el grupo de edad de la madre que más muertes maternas reportó.

La causa donde se reportó el mayor número de muertes maternas (7) fue las Complicaciones Relacionadas Principalmente con el Embarazo (N640-648).

## **NOTAS TECNICAS**

### **CAUSAS DE MUERTE**

- **ORDEN DE LAS CAUSAS** – Las causas de muertes están codificadas de acuerdo a la Novena Revisión de la Clasificación Internacional de Enfermedades. Hemos utilizado los criterios de la ordenación de muertes sugerida por la Organización Mundial de la Salud, utilizando las listas estándares de 61 causas selectas de mortalidad infantil y las 72 causas selectas de mortalidad general que sugiere el Centro Nacional de Estadísticas de Salud.

- **INFECCION POR EL VIRUS DE INMUNODEFICIENCIA HUMANA CAUSANTE DEL SINDROME DE INMUNODEFICIENCIA ADQUIRIDA (SIDA)**

Los certificados de defunción en donde se señala el SIDA como la causa de muerte, son verificados con el Centro Latinoamericano de Enfermedades de Transmisión Sexual (CLETS). Una vez el CLETS corrobora que la persona falleció por SIDA, se codifica el SIDA como la causa principal de muerte, pasando el caso a contabilizarse como muerte por SIDA en las Estadísticas Vitales.

El 14 de agosto de 1987 se modificaron y/o revisaron los criterios de diagnóstico para la clasificación de los casos de SIDA (la modificación fue efectiva el 2 de septiembre de 1987). Antes de esta fecha, los pacientes debían reunir tres criterios para considerarse enfermos de SIDA, (probar la existencia de inmunodeficiencia, la presencia del virus y evidencia de una infección o

enfermedad oportunista<sup>1</sup>). A partir de esa fecha se estableció que bastaba con que tuviera dos de los tres criterios para que un enfermo pudiera clasificarse con esa enfermedad. Por consiguiente, para el 1986 y años anteriores, existieron casos como posible SIDA dónde la causa principal de muerte codificada en los certificados de defunción, (siguiendo las guías establecidas en esa fecha) fue la neumonía o algún otro tipo de enfermedad oportunista.

---

<sup>1</sup> Datos sobre los criterios fueron suministrados por el Programa para Vigilancia del SIDA, del CLETS.

## DEFINICIONES

**Adolescentes** (madres adolescentes) – Madres menores de 20 años de edad.

**Apgar Score** – Medida resumen de una escala de 0-10, al primer y quinto minuto de vida del infante, que toma en consideración el ritmo cardíaco, esfuerzo respiratorio, tonacidad muscular, irritabilidad y color.

**Bajo Peso al Nacer** – Cualquier recién nacido que independientemente de las semanas de gestación, pese 5 lbs. 8 oz. (<2,500 grs.) o menos al nacer.

**Duración de la Gestación** – El número de semanas transcurridas entre el primer día de la concepción y la fecha del nacimiento.

**Edad Reproductiva** – Edad de las mujeres entre los 15 y 44 años. (Anteriormente en Puerto Rico se incluían hasta los 49 años, pero en la actualidad la proporción de nacimientos desde los 45 años en adelante es muy reducida).

**Mortalidad Neonatal** – Muerte de un recién nacido antes que éste tenga 28 días (hasta e incluyendo 27 días, 23 horas, 59 minutos del momento de nacer).

**Mortalidad Perinatal** – El total de muertes neonatales, más las muertes fetales con 20 ó más semanas de gestación.

**Mortalidad Postneonatal** – Muerte de un infante entre los 28 días de edad, pero antes de cumplir su primer año de vida.

**Muerte Fetal** – Muerte previa a la expulsión o extracción del vientre de la madre, del producto de la concepción humana, feto o placenta independientemente de la duración del embarazo, la muerte está indicada por el hecho de que luego de la expulsión o extracción, el feto no respira o enseña ninguna otra evidencia de vida como latidos del corazón, pulsaciones del cordón umbilical o movimientos definidos de los músculos voluntarios. Esta definición excluye la terminación de embarazos en forma inducida.

**Muerte Infantil** – Muerte ocurrida en cualquier momento después de un nacimiento hasta, pero no incluyendo, un año de nacido (354 días, 23 horas, 59 minutos del momento de nacer).

**Muerte Materna** – La muerte de una mujer por cualquier causa relacionada con o agravada por el embarazo o sus manejos (independientemente de la duración o localización del embarazo), pero no por causas accidentales o incidentales.

Las principales responsabilidades del médico en el registro de una defunción, son: declarar y especificar la causa de la muerte, (Causa y Circunstancia).

El médico que certifica es quien determina la causa de muerte. Si el médico que atendió al fallecido durante la enfermedad que le causó la muerte ("attending physician" o de cabecera) está disponible para certificar y declarar el fallecimiento, No es necesario que llene los apartados 19a al 19c, pero debe completar los apartados 20 al 29d.

Unicamente cuando el médico de cabecera no está disponible para certificar la causa y declarar el hecho de la muerte, deberá otro médico declarar la misma.
