Colour the  
Extraordinary

Our design materials hyceram, luxon and luxart open up a new dimension in colour-intensive design for watches and jewellery. They combine high-quality aesthetics with technical precision, creating surfaces full of depth, character, and elegance.

### Highest quality

Our materials impress with their striking surface hardness and high colour stability. They are easy to process and can be used flexibly for the creative design of watches and jewellery.

### Expressive colours

We offer a wide range of colours and can also realise your individual colour requests from the Pantone or RAL spectrum. Opaque or transparent surfaces, pearl effects, and day-night designs are also possible.

### Craftsmanship freedom

Our design materials can be filled, polished, and engraved conventionally. hyceram can also be machine ground or milled, as well as cast using moulds, and further processed.

**NEW**

OUR INNOVATION:

## hyceram crystal

Over the recent years, we have further developed hyceram and are continuously unlocking new design possibilities with this material. The ceramic-based composite is now also available in transparent colours, enabling transparent design elements that set new standards in terms of impression and durability.
