EXPLORE THE
ENDLESS
POSSIBILITIES
OF A
ROUNDWOOD
YURT, A TRUE
HOME FROM
HOME.

CONTENTS

OVERVIEW

Explore the many ways your yurt can be used, discover customisation options, and learn how to get the very best from your build with Roundwood.

FOUNDATION

A breakdown of our ground screw and raised timber base system, designed for stability, longevity, and adaptability to varying site conditions.

THE STRUCTURE

An overview of our precision-cut timber frame, engineered for balanced load distribution, strength, and long-term durability.

PRICING

Get an understanding of how our pricing works, and get a good understanding of how it will be applied to your own project.

CUSTOMISATION

Explore cladding, doors, finishes, and optional features that allow you to tailor your yurt to suit your vision and intended use.

01

PRODUCT

This brochure details Roundwood Yurts, covering construction, materials, insulation, foundations, and customisation options. It gives you the information you need to understand the structure, performance, and possibilities available.

OVERVIEW

HOW IT WORKS

Every Roundwood Yurt begins with a conversation. We start with a site visit and consultation to understand your location, intended use, and practical requirements. From there, we recommend the most suitable yurt configuration, foundation system, and optional features to ensure the design works beautifully within its setting.

Once agreed, your yurt is precision-crafted and installed by our team, then backed by our workmanship warranty for complete peace of mind.

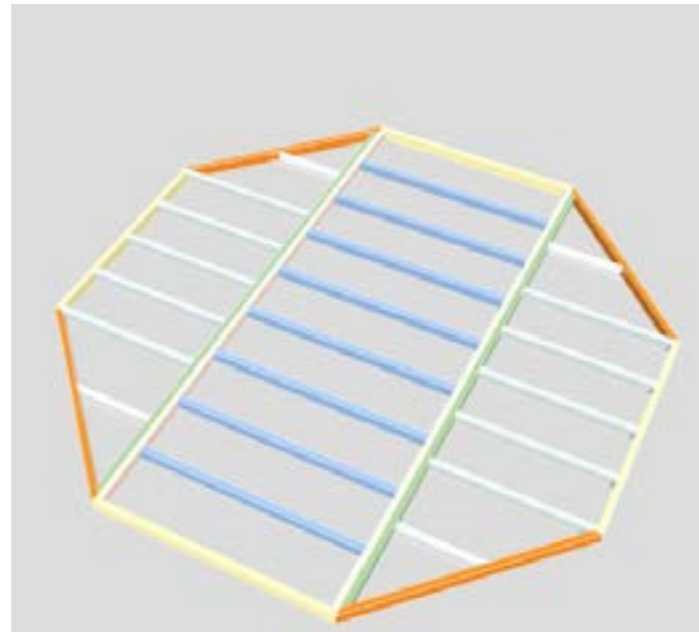

YOUR BUILD

Every Roundwood Yurt is built to order and tailored to your needs. From design choices and material selection to practical features and performance requirements, we work with you to shape a space that suits its purpose and setting. The result is a carefully considered build that feels both personal and built to last.

BROCHURE

THE FOUNDATION

Deep ground screws and a solid timber platform create a level, stable base. This system works on most terrains, keeps the yurt raised from moisture, and ensures long-term durability.

5m base design

03

THE STRUCTURE

Engineered for strength.
Designed for comfort.

Our precision-cut timber frame, 12-panel walls, and roof combine to create a beautifully balanced structure. Every element is designed for long-term performance, comfort, and flexibility, resulting in a home-from-home that stands the test of time.

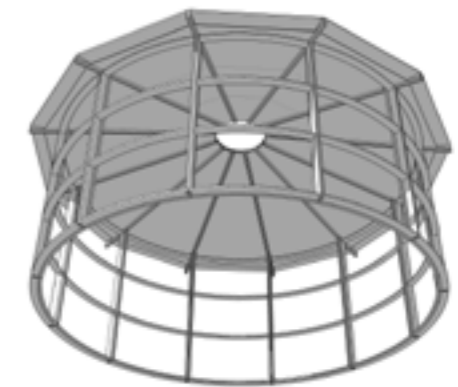

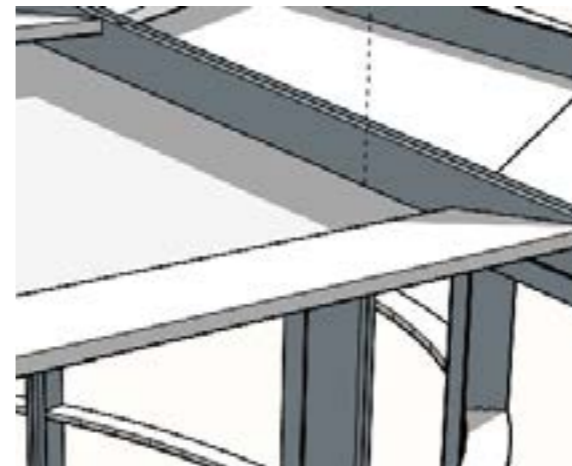

OVERVIEW

Based on a 12-panel system, the structure allows for efficient on-site assembly, reliable structural integrity, and design flexibility. Doors, windows, and other features can be positioned on any elevation to suit your layout.

THE ROOF

The roof mirrors the 12-panel wall system, meeting at a central dome that draws in natural light. A liquid polyurethane finish provides durable, flexible, year-round weather protection.

INSULATION

Each 75mm panel houses high-performance insulation, strengthening the frame while keeping the yurt comfortable year-round. It also improves energy efficiency, enhances acoustic performance, and reduces condensation.

DURABILITY

Crafted from dense hardwood layers and locally sourced FSC-certified timber, our yurt is designed to move with the wood over time. It stays strong, stable and resilient for decades, creating a truly enduring retreat.

04

PRICING

Our standard pricing includes a fully finished, weatherproof structure ready for immediate use. Prices start from around £9,995 + VAT.

Typical additions with guide prices (not inclusive of VAT):

- Installation** ~ £500
