

Extended Access Training Guides

EPS

Support

Please email mbpcc.extendedaccess@nhs.net

Pre-requisites

You need to be logged on with a smartcard in order to use EPS.

The patient must be reconciled to PDS before EPS will work, see separate training guide.

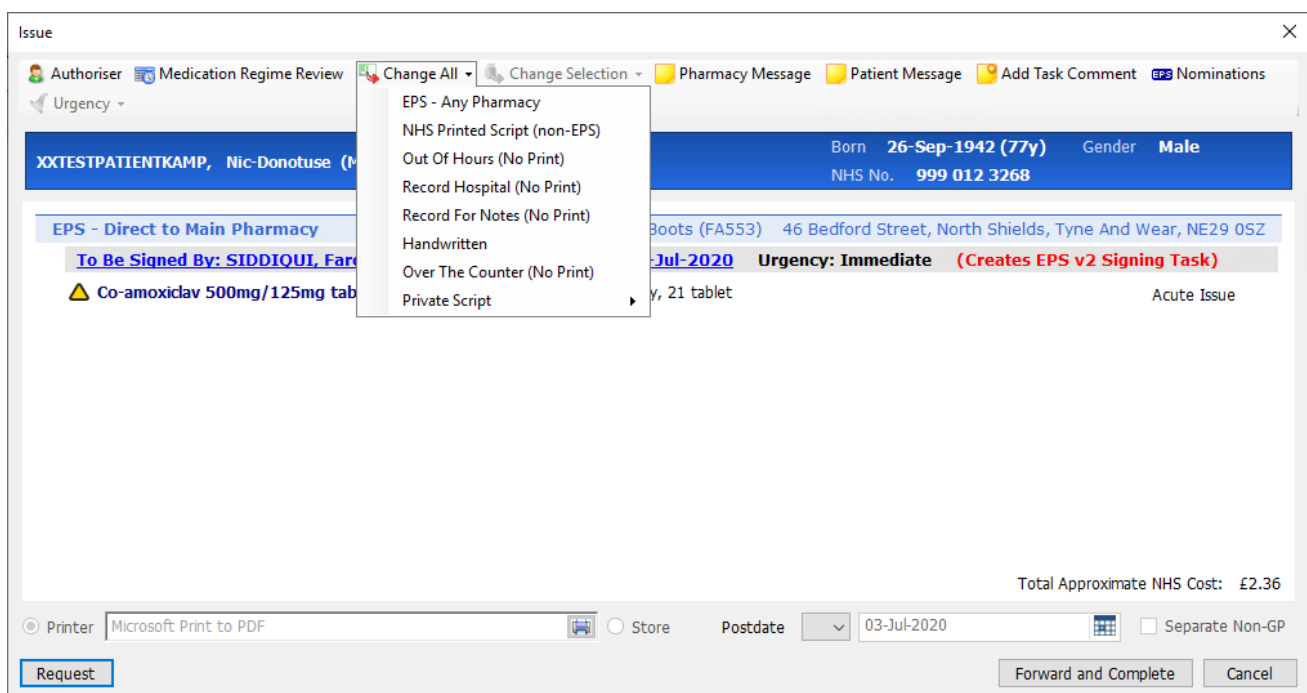

EPS

The default action in EMIS is to send a prescription via EPS whenever possible, as long as the patient has a valid nomination. You can see the current nominations at the bottom of the prescribing screen. You add drugs and prescribe in exactly the same way with the difference now being that your prescription will be issued via EPS rather than printed.

EPS Any Pharmacy

Sometimes you or the patient may need to send a prescription to a pharmacy that isn't the usual nomination. This might be the case out of hours and at weekends where their usual pharmacy isn't open.

At the Issue screen, click on Change All and then choose EPS – Any Pharmacy. This will send the prescription to spine and will allow any pharmacy to search for and dispense it.

The screenshot shows the EMIS 'Issue' screen. At the top, there's a toolbar with buttons like 'Authoriser', 'Medication Regime Review', 'Change All', 'Change Selection', 'Pharmacy Message', 'Patient Message', 'Add Task Comment', and 'EPS Nominations'. Below this, the patient information is displayed: 'XXTESTPATIENTKAMP, Nic-Donotuse (M)', 'Born 26-Sep-1942 (77y)', 'Gender Male', 'NHS No. 999 012 3268'. The medication is 'Co-amoxiclav 500mg/125mg tab'. The 'Change All' dropdown menu is open, showing options: 'EPS - Any Pharmacy', 'NHS Printed Script (non-EPS)', 'Out Of Hours (No Print)', 'Record Hospital (No Print)', 'Record For Notes (No Print)', 'Handwritten', 'Over The Counter (No Print)', and 'Private Script'. The 'EPS - Any Pharmacy' option is selected. At the bottom, there's a 'Request' button and a 'Forward and Complete' button. The total approximate NHS cost is £2.36.

Extended Access Training Guides

You will need to provide the patient with their NHS number or the EPS token so a pharmacy can search for their prescription. You can find the NHS number in the patient bar. To get the EPS token, select the drug and go to Drug History.

Expand the Medication Issue you need the token for. Click the View hyperlink. The pale blue bar at the top of the View prescriptions window will show you the EPS token in brackets.

Some parts of the screenshot below have been redacted for data protection purposes.
