

How Nubis365 Transformed Microsoft 365 Security with Overe

Nubis365 is a UK-based Managed Service Provider (MSP) delivering managed IT support and Microsoft 365 security across dozens of client tenants. As the tenant count grew, checking security configurations and catching configuration drift meant constant manual work, with no simple way to keep every tenant on a consistent baseline.

CHALLENGE

Nubis365 manages Microsoft 365 across dozens of separate client tenants. As the business scaled, checking security configurations, monitoring license compliance, and catching configuration drift meant logging in and out of individual admin centres one tenant at a time, with no easy way to keep every client on the same security baseline.

Key challenges:

- Manually auditing tenant settings and security configurations one login at a time
- Relying on senior engineers to build custom scripts and interpret raw logs
- Configuration drift going unnoticed between manual checks
- No consistent, repeatable security baseline as the tenant base grew

Focus	Managed IT Support for SMEs across the Midlands, UK

SOLUTION

Nubis365 adopted **Overe** to bring Assess, Harden, and Monitor into one centralised process across its full tenant base, giving the team a single pane of glass that **instantly surfaces security posture, applies hardening policies in a fraction of the time, and flags anomalies or policy drift the moment they occur.**

Using Overe's centralised policy deployment and continuous monitoring across every tenant, the team moved from reactive, ad hoc checks to one standard process applied consistently to every client.

How Nubis365 Transformed Microsoft 365 Security with Overe

THE STRATEGIC PARTNERSHIP

This partnership has given Nubis365 a consistent way to **assess, harden, and monitor** Microsoft 365 security across every client tenant, **and the confidence** that comes from knowing every tenant meets the same standard.

"Even in the short time we've used Overe, it has fundamentally changed our efficiency. Hardening environments and applying best-practice policies no longer means building everything from scratch per client, and we get immediate visibility the moment an anomaly or policy drift occurs. It gives both our engineering team and our leadership total confidence that our baseline security standards are being consistently enforced across every single tenant."

- Mike Windsor, Director, Nubis365

RESULTS

- ✓ **Centralised assessment** of Microsoft 365 security posture across every tenant
- ✓ **Consistent policy hardening** applied in a fraction of the time it took to build from scratch per client
- ✓ **Continuous monitoring** that flags anomalies and configuration drift as they happen
- ✓ **Less reliance** on senior engineers for manual audits and custom scripts
- ✓ **Total confidence** for engineering and leadership that baseline standards are enforced across every tenant

By bringing assessment, hardening, and monitoring into one centralised platform, Nubis365 has cut manual admin time and given both engineering and leadership a defensible, consistent security standard across every client.

WHY IT MATTERS?

For a growing MSP like Nubis365, manual processes and engineer burnout don't scale. Overe gives the team one process across every tenant, cutting the admin drag that used to fall on senior engineers. The result is a repeatable security standard the team can stand behind in every client conversation.

READY TO SEE BY YOURSELF?

Get started now with Overe.

Get full platform access, Assess, Harden, Monitor, and Respond, on your own tenant with a 14-day free trial. No commitment beyond the 14 days.
