

Scheduling & Slot Management

APM's **SchedulePlanner** enables you to efficiently monitor and manage your production schedules, including slot management for current and future seasons.

ScheduleSim allows you to design and refine multiple scheduling scenarios and compare them against historical slot data, while **OpsConnect** provides real-time access to live scheduling and flight-watch displays via the mobile app.

These tools work together to improve your airline's operational efficiency and optimise your slot management processes.

Crew Management & Rostering

Delivering you efficient management of your airline crews, rosters, and training. **CrewLogic** optimises crew roster pairings and rosters for high performance and cost efficiency, while **CrewSim** allows testing of multiple crewing scenarios to identify your very best options.

The **CrewConnect** app gives your crew access to essential information online, such as rosters, briefings and alerts.

Aircraft Operations & Flight-watch

APM operations tools deliver you real-time flight monitoring and efficient decision-making. **SmartOps** presents your live-data for managing day-of-operation flights, helping you to reduce delays to keep your schedules on track.

OpsConnect offers you live scheduling, punctuality, and flight-watch information accessible via a mobile app, which supports your executives, ground-handlers and operational personnel.

APM Mobile Apps

APM Mobile apps enhance your operational control and crew management through real-time access to critical information.

OpsConnect supports day-of-operation updates, while **CrewConnect** gives your crew members access to rosters, social chats, briefings, and updates on-the-go, improving communication and efficiency.

These mobile solutions ensure your airline operations run smoothly by keeping both crew and operations teams always connected – anytime, anywhere.

Seamless Integration & Messaging

APM integration services streamline data exchange between your airline systems using industry-standard protocols such as SSIM, SSM, ASM, and MVT.

The transition from SOAP-based (Simple Object Access Protocol) to REST-based (Representational State Transfer) integration improves efficiency and scalability.

Our REST API delivers you a seamless data communication experience across various modules, enhancing flexibility. APM's expanded Partner Integration service enables efficient DCS, code-share, flight handling and data export to partners, including airlines, inventory systems, and ground handlers.

Installation & Support

APM's installation service ensures seamless deployment of all your software solutions, with end-to-end support from setup to system configuration, ensuring smooth integration with your airline operations.

But we don't stop there – with unparalleled post-installation customer support you'll experience optimal system performance down the line. Our multi-language help desk supports you with issues ranging from minor to critical.

Furthermore our consultancy tailors solutions to your exacting needs, backed by rigorous testing and configuration support. We also train your users to ensure smooth implementation and system proficiency, avoiding disruptions to your operations.
