

Armco Barrier

Increase public safety by using CLA Armco Barrier on your project

CLA are now suppliers of steel Armco crash barriers. Armco crash barrier is widely used for low impact and low speeded applications such as car parks, residential areas, and industrial sites to protect people, machinery, key assets/ infrastructure, buildings and warehouses.

Our Armco range are all made from tough steel, making them perfect for the busiest of areas and providing long-lasting protection when needed.

This system has many benefits and protecting the public is one of its key features, it can dramatically reduce the speed of the vehicle that strikes the barrier.

We carry a large extensive range of accessories to suit the armco including, various post styles, ends, corners & fittings.

Suitable For:

- Car Parks
- Warehouses
- Freight Depots
- Loading Bays

Armco Overview

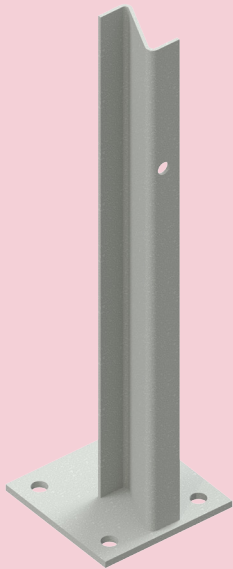

Standard beams are 3504mm long with an effective length of 3200mm due to the overlap when fixing. Manufactured from a 2.5mm thick steel. Supplied as standard in a Galvanised finished with the option to Polyester Powder Coat to increase visibility & safety.

Standard Armco Fixing

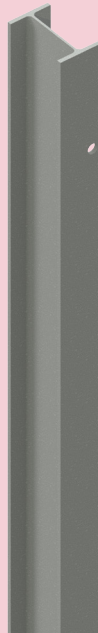

Beams fix together using a recommended 8 No. lap bolts and connect to our range of posts using 1 No. post bolt.

Standard Post Range To suit Armco Safety Barriers

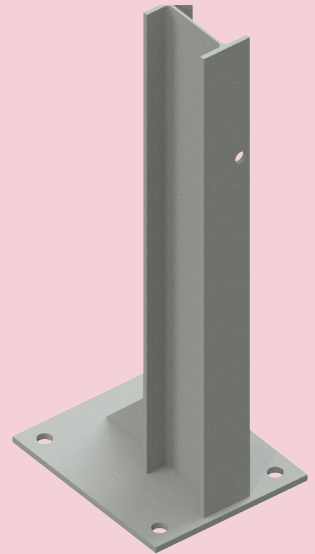

Baseplated "Z" Post

Root Fixed "RSJ" Post

Baseplated "RSJ" Post

Here at CLA, we carry a range of different posts available from stock including our bolt down range which is ideal for use when installing barrier on a service yard concrete slab or inside a warehouse. These posts should always be installed onto a solid service. We do also supply Root Fixed RSJ posts which are mainly used for outdoor installations and can be easily installed into the ground. Each post only uses 1 No. Post bolt to secure the beam to the post, these holes come pre drilled in all our posts.
