

## Pour-in-Place Play Surface Installation Process

---

01

### Project Briefing

Analyzing site location, usage, and funding to establish a strategic roadmap.

02

### Feasibility & Planning

Business case development and planning applications; consulting for large projects.

03

### Site Assessment

Rigorous surveys of topography, drainage, and geotechnics for a stable foundation.

04

### Technical Design

Production of high-precision design specifications and detailed technical drawings.

05

### Procurement

Comprehensive tender review and contractor selection to ensure project success.

06

### Construction

Precision building with independent quality control for specification conformity.

07

### Completion & Handover

Safety compliance testing and delivery of a customized maintenance regime.

08

### Continuous Aftercare

Warranty support and ongoing monitoring to ensure long-term surface integrity.
