

Steve Montgomery

General Manager, Structural Steel

As General Manager, Steve Montgomery brings 41+ years of industry experience and a deep background in structural steel, industrial rigging, fabrication, and field operations. His expertise spans welding, estimating, project management, steel erection, and division leadership. Since helping establish the processes and procedures that shaped Stewart Richey's Structural Steel and Industrial Rigging division, Steve has overseen its growth from a small field crew into a team of more than 60 employees fabricating, delivering, and installing steel across multiple states.

Project Experience

OI Glass - Bowling Green, KY

Stewart Richey Structural Steel supported the OI Glass industrial bottling facility through steel fabrication, delivery, and installation under Steve Montgomery's leadership. The project required careful coordination of manpower, materials, and field execution to meet the demands of a large-scale industrial facility. Stewart Richey's team maintained focus on quality, safety, and schedule performance throughout the steel scope.

Logan Aluminum - Russellville, KY

For the Logan Aluminum manufacturing expansion, Stewart Richey Structural Steel provided steel support for a major industrial project requiring precision, coordination, and efficient field execution. Steve Montgomery oversaw the division's involvement, helping manage fabrication and installation efforts in alignment with the project's schedule and operational requirements. The work supported continued growth within a high-demand manufacturing environment.

Trace Die Cast - Bowling Green, KY

Stewart Richey Structural Steel has supported various projects at Trace Die Cast, an aluminum die-casting facility in Bowling Green, KY. Under Steve Montgomery's leadership, the team has provided structural steel services across multiple phases and scopes. The work required close coordination with project teams and facility operations to maintain progress, quality, and safety throughout delivery.

Crown Cork & Seal - Bowling Green, KY

Stewart Richey Structural Steel supported Crown Cork & Seal through industrial steel scopes completed across 2022 and 2023. The project involved work within an industrial bottling facility environment, requiring strong coordination, planning, and attention to field conditions. Steve Montgomery led the division's efforts to help deliver steel work efficiently while meeting project expectations.
