## Unified Airport Communication Platform

Airport CX brings your PA, displays, and flight data into one place.

Designed to handle both simple and complex use cases, the solution delivers powerful automation tools and advanced capabilities such as visual paging, speech-to-text, and text-to-speech.

### Digital Signage & CMS

FIDS is just the start. Manage gate displays, wayfinding, and advertising from one CMS—turning downtime into revenue.

### Intelligent Voice Announcement System

AI-powered announcements in 80+ languages using real-time flight data. Natural TTS that adapts automatically to schedule changes.

### AODB & Flight Management

Real-time flight data synchronization with instant manual override. Automated updates meet on-demand control when situations change.

### Mission-Critical Airport Hardware

From nounce audio devices to display controllers and operator touchscreens—unified hardware that simplifies daily operations.

### How It Works:

Boarding Call Use Case

Gate Agent Clicks  
"Final Boarding"  
on touchscreen

Auto-Announcement  
Plays in selected  
language/s

Display Updates  
Text appears  
simultaneously

Complete  
One click. Total  
coordination.

## Why Airports Need Unified Systems

Multiple disconnected vendors mean operational chaos, compliance gaps, and budget drain.

4 Vendors

Audio Hardware

FIDS Displays

4 Credentials

4 Contracts

AODB Data

PA Systems

Limited Integration

Airport CX unifies it all.

# The Power of Synchronized Communication

Airport CX is a market-leading CMS platform that unifies displays, voice, flight data, and audio hardware into a single, unique solution. Continuous product improvements ensure the platform remains high-end.

## Scenarios: Ready for Emergencies

Managing operations at airports can be complex, but responses can be prepared in advance for any scenario before it occurs, rather than reacting after the fact, using coordinated audio-visual emergency protocols.

Automate announcements and displays for both emergencies and routine events, ensuring timely and efficient communication with passengers and staff through unified messaging channels.

## Unified Control for Critical Airport Operations with nnounce Audio Hardware

Achieve professional communication with the perfect blend of Airport CX and nnounce audio hardware, delivering unparalleled reliability, security, and clarity. nnounce hardware ranges from different types of microphone stations, to audio integration devices, controllers and amplifiers. Professional audio for a smooth and secure airport experience.
