

August 2026 EHR Release

New updates to the GeneDx integration are designed to streamline ordering, reduce delays, and improve turnaround time.

Why upgrade to the new release?

Give your lab and clinical teams the tools to:

- ✓ **Eliminate Reorders & Delays**
Authorize extra testing directly from a single specimen.
- ✓ **Accelerate Turnaround Times**
Speed up results when reflex testing is required.
- ✓ **Supercharge Provider Workflows**
Remove manual steps with a clearer, more intuitive ordering process.
- ✓ **Prevent Lab Holds & Follow-Ups**
Ensure order accuracy the first time to keep workflows moving.

What's new

Exome-to-Genome Reflex

You'll be able to order our Exome-to-Genome test via Aura as well as P2P. This version automatically reflexes to Genome testing if the initial Exome results are non-diagnostic.

Genome Order Updates for Prior Authorization

Automated Exome-to-Genome Conversion Acknowledgment

When choosing "Insurance" as your payment method without an "Approved" prior authorization status, a final verification question will cascade. This question ensures you acknowledge that your Genome order will be shifted to an Exome-to-Genome Reflex order if insurance coverage is ultimately denied.
