Fortalis

Integrity in Data

Sovereign cloud infrastructure for enterprises, public sector and mission-critical workloads. Scalable capacity with predictable costs, fully compliant with European regulation.

About Fortalis

Fortalis is a sovereign European cloud-infrastructure provider headquartered in Spain. We serve enterprises and public institutions, as well as Managed Service Providers (MSPs) and Software Vendors (ISVs) that build solutions on our platform.

Our commitment to our customers

Data is a business's most valuable asset. It creates value for organizations and, at the same time, must be carefully protected, managed, and moved across environments. In today's geopolitical landscape, effective data management has become more critical than ever.

Our priorities:

☑ Reducing dependency on non-European hyperscalers to strengthen data sovereignty.

☑ Providing predictable and affordable cloud costs across storage, egress, and API usage.

☑ Enabling compliance with regulatory and sector-specific requirements, including GDPR.

☑ Delivering secure, resilient cloud infrastructure for modern applications, critical data, and Disaster Recovery.

Fortalis

Company values

The values which express how Fortalis approaches its customers, its technology, and every decision made as a cloud services provider.

Trust
Reliable, resilient cloud services safeguard critical data and mission-critical workloads.

Transparency
Clear pricing, architecture, and operations ensure there are no hidden surprises.

Empowerment
Open standards and seamless integration give customers real control over their data and infrastructure

Security & Sovereignty
Built-in security and European data sovereignty help organizations meet strict regulatory requirements while maintaining full control over their data.

Our Mission
To deliver sovereign, secure, and transparent cloud services that give organizations full control over their data, while simplifying how they protect, manage, and recover it.
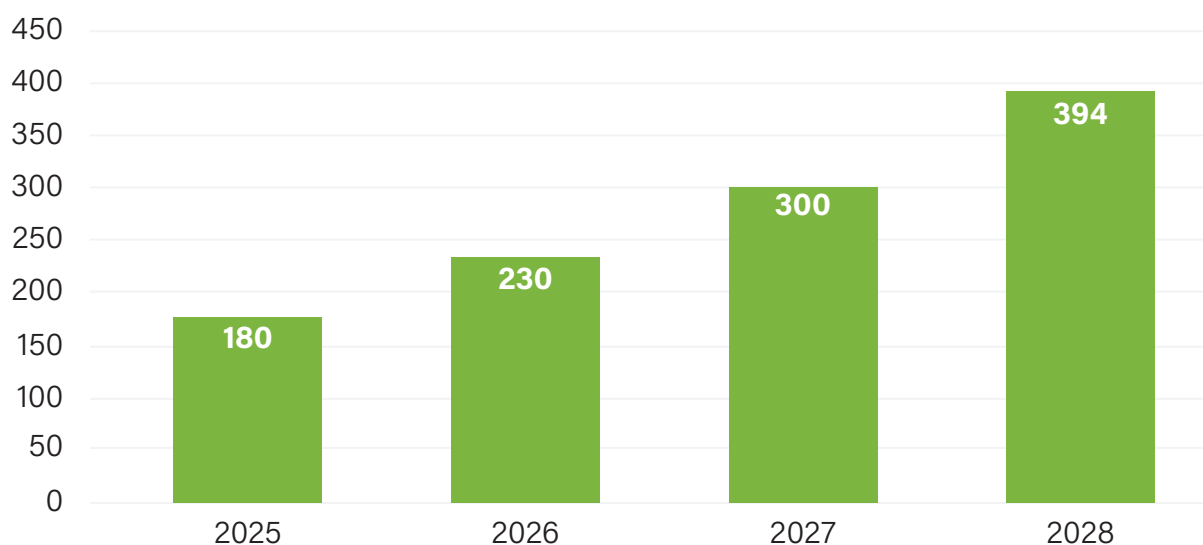

Data creation and data storage

We are living in a time where data creation is accelerating fast. In just a few years, the volume of data created worldwide is forecast to rise from roughly 64 zettabytes in 2020 to more than 180 zettabytes in 2025, nearly tripling within five years. Of course, AI plays a crucial role in this explosive growth, but also the roll-out of smart cities, autonomous vehicles and new technologies that require more storage capacity like 4K CCTV cameras.

Not all data that is created will be stored, but a growing share will be as more organizations recognize the value it can unlock through AI-driven analysis. In addition, new regulation about data retention is also a key driver for data storage consumption.

As organizations increase their use of AI and analytics, the share of data that is stored and retained is expected to rise.

Data Creation in Zettabytes
estimated, based on IDC growth to 2028

Year	Zettabytes
2025	180
2026	230
2027	300
2028	394

Data workflows

We focus on data workflows that protect and enable the most valuable asset of any organization—its data. We keep it safe, available, and ready to drive business forward.

Backup & Archive

Affordable, secure off-site backups and long-term archives, always ready to restore with no extra fees for recovery or immutable protection.

Disaster Recovery

Resilient disaster recovery that rapidly spins up virtual machines in our sovereign cloud, keeping core systems online and business operations running when your primary environment goes down.

Active Media Storage

High-performance cloud storage for active media, with instant access to your content. Ideal for cloud tiering, long-term archiving and speeding up end-to-end media workflows.
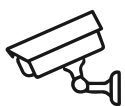

Data Migration & Centralization

Moving data from on-premises systems, consolidating it from distributed storage silos, or exiting costly hyperscale clouds—all through a secure, fully cost-transparent migration process.

Multi-Tenancy

The solution for MSPs and ISVs to provision and manage multiple customer sub-accounts from a single place, fully white-labelled with their own brand.

Video surveillance

Securely store CCTV footage off-site to meet local retention rules and protect recordings against loss or tampering.

Fortalis

We invite you to connect

People do business with people they know and trust. Reach out to get to know us and to discuss your data needs. We will analyse your current data workflows and help you to optimize them.

If you want to see our platform or would like to try it out yourself, request a live demo or a trial account.
