

CMMC Compliance

Protecting DoD Data with Cyberhaven

What is CMMC and Why Does It Matter?

- The *Cybersecurity Maturity Model Certification* (CMMC) is the Department of Defense's framework for verifying that contractors and subcontractors are protecting sensitive government data. -

Unlike previous self-attestation models, CMMC is enforced through DoD contracts. If your organization does not meet the required CMMC level, you may be ineligible to bid, win, or retain DoD work.

for contractors and subcontractors, CMMC directly impacts

- contract eligibility
- audit readiness
- data handling practices across your supply chain

CMMC Levels at a Glance

Level 1	FCI	basic	annual self-assessment
Level 2	CUI	moderate	self or third-party
Level 3	High Risk CUI	advanced	government-led

- Most defense contractors fall under CMMC Level 2, which requires full implementation of the 110 NIST SP 800-171 controls. -

- How Cyberhaven Supports CMMC Compliance -

Cyberhaven operates as an External Service Provider (ESP) within the CMMC ecosystem.

• sensitive data discovery & classification

identify and scope FCI and CUI accurately across endpoints, SaaS platforms, and cloud environments

• data lineage and movement tracking

understand how CUI flows between users, systems, and third parties

• continuous monitoring and policy enforcement

support NIST 800-171 requirements for access control, auditability, and data protection

• real-time visibility and evidence generation

maintain audit-ready proof of control effectiveness

• insider risk and misuse detection

reduce exposure from over-sharing, misuse, or credential compromise

Cyberhaven complements your broader CMMC program by strengthening the datasecurity foundation required for compliance.

before assesment

gain visibility into CUI, data flows, and access paths

during readiness

support control implementation with measurable enforcement

after certification

maintain continuous compliance as environments change

- Rather than treating CMMC as a one-time audit, Cyberhaven helps make compliance sustainable, defensible, and aligned with real-world risk. -
