

Cyberhaven Insider Risk Intelligence Service (IRIS)

Organizations face growing insider risk threats, from data exfiltration to policy violations. Yet most security teams lack the structured programs, cross-functional workflows, and expert guidance needed to operationalize insider risk management across HR, legal, security, and the business.

IRIS combines threat intelligence, program assessment, and prescriptive workflows to help organizations build and mature their insider risk programs. Focused on building and maturing your insider risk program, IRIS delivers expert analyst support, structured maturity scoring, and cross-functional operational guidance, all grounded in Cyberhaven's proprietary Threat Actor DNA framework.

Key Features

Quarterly Insider Threat Patterns

- Research into emerging insider threat patterns
- Cross-customer trends
- Policy and detection deployment

Quarterly Insider Risk Program Maturity Assessment

- Program evaluation against Threat Actor DNA types and key risk scenarios
- Capability scoping across visibility, governance, and remediation
- Output prioritization

Biannual Executive Insider Risk Review

- Summarizes program progress, maturity changes, and connecting findings to business-level impact
- Aligns on the next two quarters of insider risk priorities and workflows

Program & Workflow Consultation

- Workflow mapping for non-technical stakeholders
- Guidance and strategy insights
- Dashboard and remediation runbook creation

Insider Risk Community Access

- Quarterly community meetups focused on insider threat and program best practices
- Slack-based discussion space for questions, field patterns, and peer sharing
- Regular news and curated reports on insider threat and data exfiltration trends

Labs Analysis on Threat Actor DNA (optional)

- Manual analysis of recent user activity to identify individuals fitting key insider risk types as defined by Threat Actor DNA
- Prioritized list delivery for review within the IRIS reporting package
