

# Modern data security for law firms

Cyberhaven is transforming how law firms protect their data while getting things done for their clients.

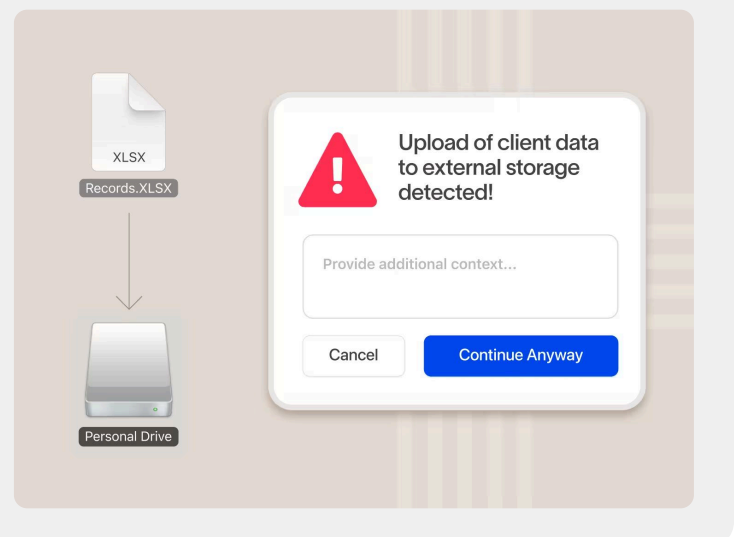

## Protect client privacy and enforce ethical walls

Every document and communication associated with your clients demands the utmost level of confidentiality, even as it circulates within your firm. Cyberhaven empowers you to implement rigorous policies and controls to ensure the protection of client privacy.

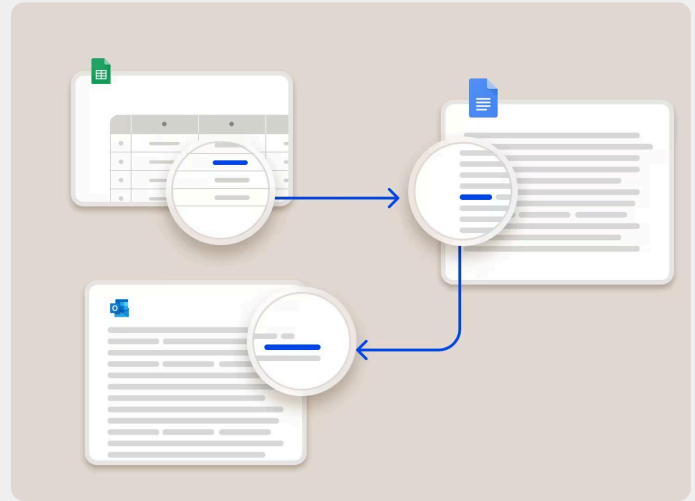

## Flexible security that doesn't block work

In the fast-paced legal world, teams work against tight deadlines and field strange requests from clients and judges. Cyberhaven offers teams a range of policy enforcement options to help find the right balance between security and productivity.

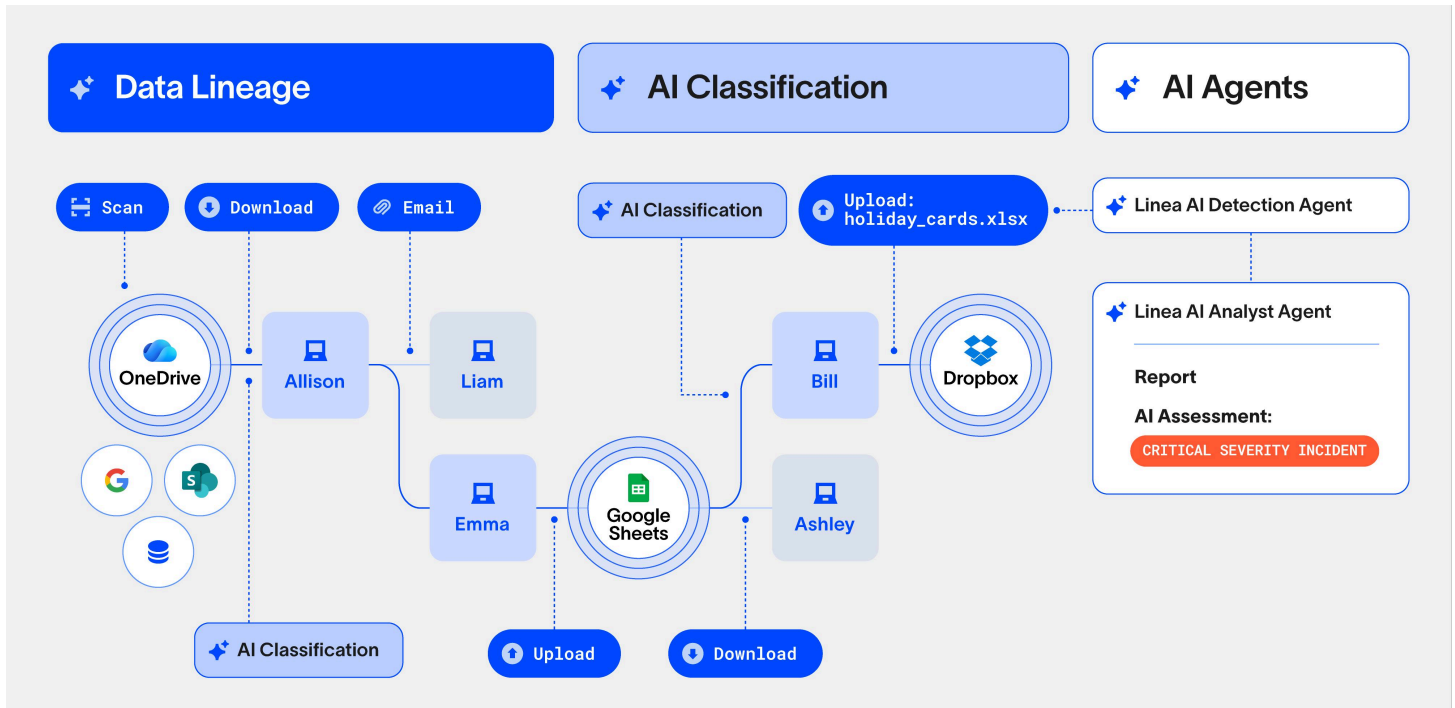

## Prevent honest mistakes like sending documents to the wrong destination

Legal professionals work long hours often for many clients at once. Cyberhaven provides the granular control needed to secure your data against mistakes that can compromise client trust and ruin your firm's reputation.

## The Magic behind Cyberhaven is Data Lineage

Data lineage is a technology that's only available from Cyberhaven that powers best-in-class identification and protection of sensitive data.

## Discover Unknown Unknowns

Without the need to create any policies, data lineage reveals unknown unknowns about how employees are accessing, creating, and using sensitive data. These insights help teams build better data security programs through better workforce education and complete visibility into the impact of any policies before they are deployed.

## Rich context for classification

For every piece of data, lineage reveals where it originated, how it was handled, and who interacted with it. This metadata can be used alongside content analysis to classify data and enable protections for sensitive data.

## Accelerate internal investigations

When incidents occur, the historical context provided data lineage instantly reveals the entire lead-up to the incident. This lets analysts quickly differentiate between malicious intent and honest mistakes, and reveal gaps and misconfigurations they may have contributed to a potential breach.

## Seeing is Believing

The best way to understand the magic of Cyberhaven is to see a live demo.

## About Cyberhaven

Cyberhaven is reimagining data security. Until now, data security products have been limited to scanning data content or looking for specific user actions. Our AI-enabled data lineage technology analyzes billions of workflows to understand every piece of data within an organization, identify when it's at risk, and take action to protect it.
