

Comprehensive Data Protection for Healthcare

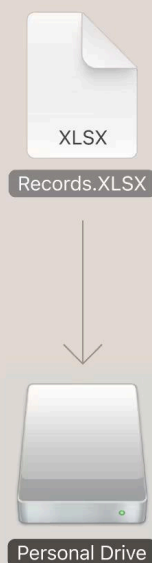

In today's healthcare landscape, protecting patient privacy and safeguarding confidential healthcare data are paramount. Cyberhaven offers modern DLP and IRM solutions to help meet this challenge.

Securely deliver healthcare with Cyberhaven

Protect patient privacy and maintain compliance

Cyberhaven helps prevent the intentional or accidental leakage of patient data by providing accurate data classification and the ability to enforce acceptable use policies in real-time.

Upload of client data to external storage detected!

Educate your workforce in real-time

Cyberhaven provides flexible response options and customizable messages to educate your team on appropriate use and find the right balance between security and productivity.

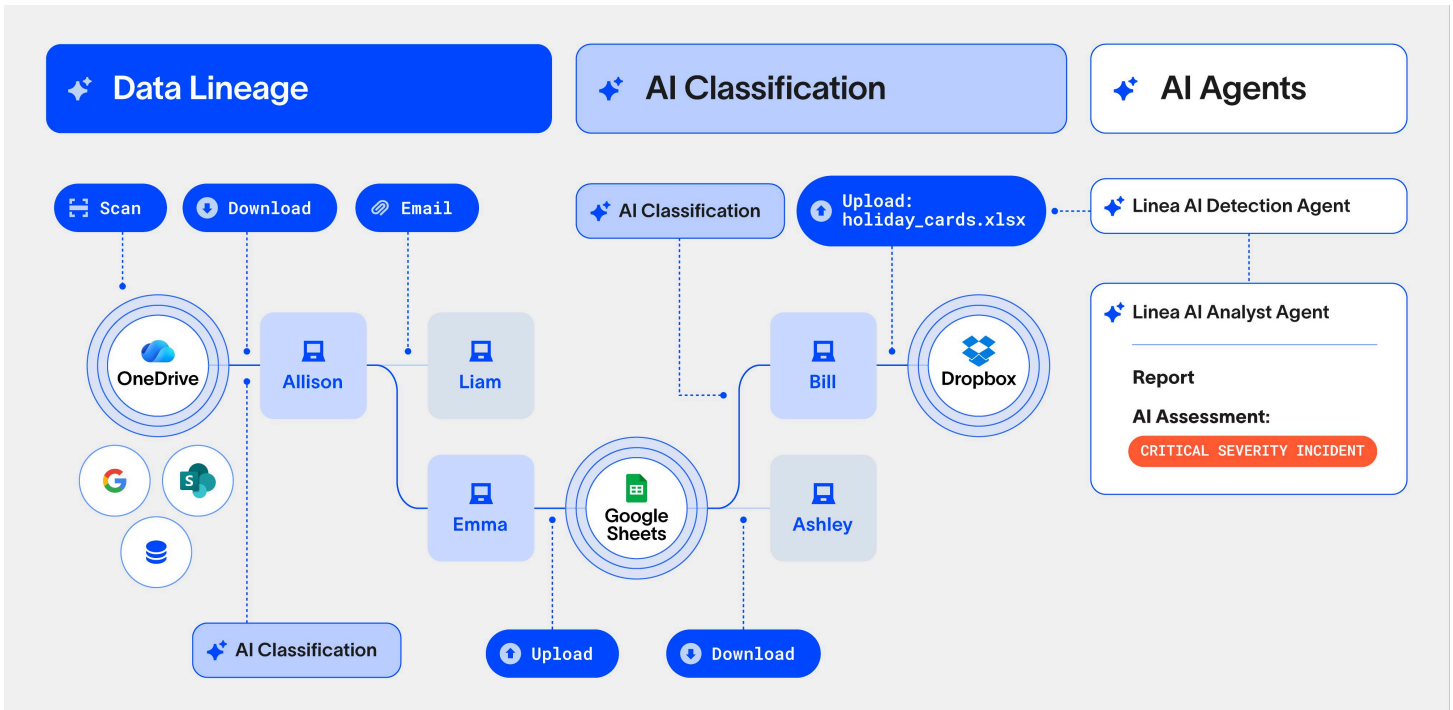

Comprehensive Protection from Customer Data to Source Code

Cyberhaven provides the full history of data in the lead-up to an incident, giving you instant context into how an incident occurred and what improvements to security and governance need to be made.

The Magic behind Cyberhaven is Data Lineage

Data lineage is a technology that's only available from Cyberhaven that powers best-in-class identification and protection of sensitive data.

Discover Unknown Unknowns

Without the need to create any policies, data lineage reveals unknown unknowns about how employees are accessing, creating, and using sensitive data. These insights help teams build better data security programs through better workforce education and complete visibility into the impact of any policies before they are deployed.

Rich context for classification

For every piece of data, lineage reveals where it originated, how it was handled, and who interacted with it. This metadata can be used alongside content analysis to classify data and enable protections for sensitive data.

Accelerate internal investigations

When incidents occur, the historical context provided data lineage instantly reveals the entire lead-up to the incident. This lets analysts quickly differentiate between malicious intent and honest mistakes, and reveal gaps and misconfigurations they may have contributed to a potential breach.

“Staying ahead of the competition means guarding against insider threats. Cyberhaven gives us visibility into how data flows within our company and stops insider threats in real time.”

Richard Rushing,
CISO, Motorola Mobility

Seeing is Believing

The best way to understand the magic of Cyberhaven is to see a live demo.

About Cyberhaven

Cyberhaven is reimagining data security. Until now, data security products have been limited to scanning data content or looking for specific user actions. Our AI-enabled data lineage technology analyzes billions of workflows to understand every piece of data within an organization, identify when it's at risk, and take action to protect it.
