

Wireless Alert Button

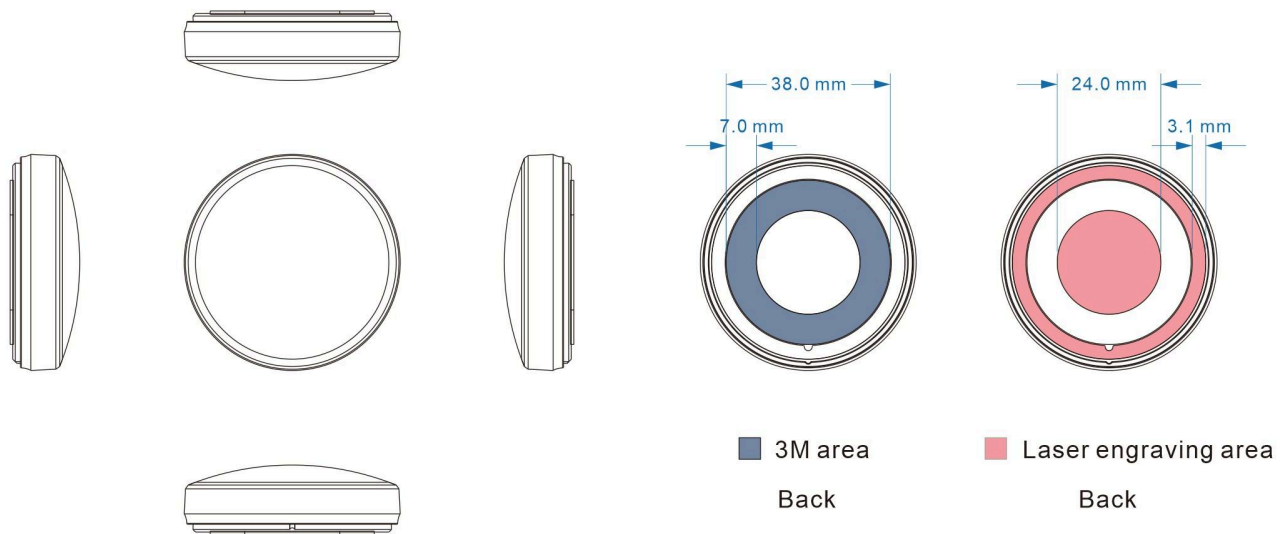

Overview

The Wireless Alert Button empowers drivers with an easy, tactile way to flag any moment for review.

One press. Hands close to the wheel. Eyes on the road.

The button pairs wirelessly to any windshield-mounted Driver-i device and mounts wherever it is most natural for the driver to reach: dash, center console, or steering column.

Easy installation and pairing only takes minutes per vehicle and requires no wiring, no charging, and minimal driver training. IP65 rating protects against cab dust and spills, and a green/red LED makes device health a quick visual check.

Device is powered off during shipping. To power on the device, long press the button (more than 3 seconds) until the LED blinks continuously for 3 seconds.

Once the button is powered on, it cannot be Power OFF in its life time.

LED color

- **Green:** Battery is healthy
- **Red:** Battery is low. Device needs replacement

Full Specifications

Structure

Dimensions	Diameter: 50 mm Height: 15.5 mm
Weight	30 g
Material	PC
IP Rating	IP65
Operating Temperature	-20°C to +60°C
Color	Black

Hardware

BLE version	BLE 4.2
Button	Yes
LED	Green & Red
Range	Up to 150m

Installation

Mount type	Adhesive Tape
------------	---------------

Battery

Capacity	500mAH
Model	CR3032
Replacement	Non-Replaceable
Rechargeable	Non-Replaceable
Type	Lithium
