

# custom in-house fabrication.

EDA's 50,000 sqft in-house fabrication facility includes three specialized shops focused on delivering locally customized exterior walls, metal trims, and curtain wall assemblies directly to the customer.

We provide field-measured and verified, precision-fit aluminum composite material and solid plate metal wall panels and accents. These are designed, cut, and fabricated with fast turnaround times to meet a wide variety of product and color requests.

Our sheet metal trim shop offers a range of profiles tailored to each building's unique transitions and accents—while maintaining a water-tight seal.

Our glazing shop is where each storefront, curtain wall system, and door frame and hardware are matched with the glass needed to create a building that is safe, energy-efficient, and distinctively beautiful.

Our fabricators are members of Carpenters Union Local 158.

In-house machinery includes:

- BAYKAL HNC 4110
- Cidan K25-30
- EUROMAC MULTI 220/6R
- Multicyl
- Ras Flexibend
- Ras Turbobend
