Emergency Response

VR Module Overview

VR module created by GWPRO.IO

- Learning
- Training
- Certificate

Experience Overview

What's included in VR Emergency Response

In GWPro Emergency Response VR Training, you step into the role of a worker in a glazed machine hall when a drone-attack alarm sounds.

You take cover in a windowless room, shut your machine down, then meet a fork in the corridor: live torn cables one way, a small fire the other. You clear the fire, help an injured colleague, muster and call the emergency services.

Available in 10 Languages

- German
- Hindi
- Polish
- Portuguese
- Italian
- Spanish

User Control

Empowering users with hands-on precision in every simulation.

Module Walkthrough

In the Learning Mode you'll be guided through the following steps. In the Training and Exam modes you'll be on your own completing the task. To exit the task press the Menu button.

1. Welcome to the emergency-response VR trainer for an industrial site. Choose the trainer mode. Point the controller at the mode you want and pull the trigger.

2. You are acting as a machine operator at an industrial site. Your task is to respond safely to an emergency at your workplace and evacuate to the assembly point. Before performing this task, you received theoretical instruction on workplace emergency preparedness and response.

3. Move away from the south-facing windows — flying glass and blast pressure are dangerous. Turn toward the north door.

4. Go to the north door. Point the controller at the teleport point and pull the trigger.

5. Take cover in the windowless room. Go through the north door into the safe zone and stay there.

6. Stay low and wait for the blast to pass before moving on.

7. The immediate danger has passed. Make the equipment safe before evacuating, then head for the east door.

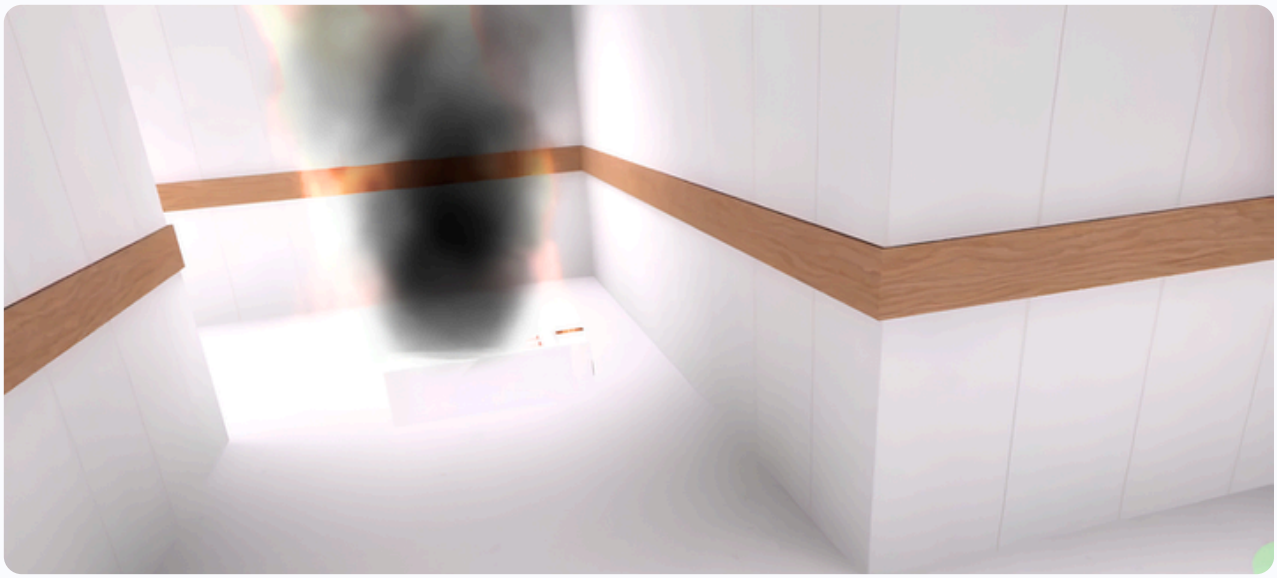

8. Return to the work post. Point the controller at the teleport spot and pull the trigger.

9. Press the emergency-stop button on the machine. Move your hand to the button and pull the trigger.

10. Assess the situation at the fork and choose the safe passage.

11. Go to the east door. Point the controller at the teleport point and pull the trigger.

12. Go out through the east door and move along the corridor to the fork.

13. Look at the fork. Point the controller at the torn cables in the left passage and pull the trigger. They are energized — do not approach.

14. Choose the safe passage. Go right, not past the energized cables.

15. Follow the safe path

16. Open the fireshield window

17. Take the key

18. Insert the key to the hole

19. Open the door

20. The way to the exit is blocked by a fire. Take the fire extinguisher from the wall station. Move your hand to it and pull the trigger.

21. Pull the safety pin out of the fire extinguisher.

22. Test the extinguisher: give a short test burst to the side before approaching the fire.

23. Put out the fire. Aim at the base of the flames and sweep side to side.

24. Release the discharge nozzle and then the fire extinguisher. To do this, pull the trigger of the controller corresponding to the hand.

25. Evacuate east and help the injured colleague.

26. Move to the exit along the marked route, using only the safe teleport spots.

27. Approach the injured colleague. Teleport to the spot next to them.

28. Decide how to help the colleague. First check whether they are responsive and can walk.

29. Check whether the colleague is responsive: call out and gently tap their shoulders, without moving the head or neck.

30. Approach the first-aid station

31. Open the station door

32. Take the first-aid kit. Bring your hand to it and pull the trigger.

33. Place the first-aid kit on the ground next to the colleague. Bring it to the marked spot and release the trigger.

34. Open the first-aid kit. Bring your hand to the lid and pull the trigger.

35. Take the pressure bandage from the open kit. Bring your hand to it and pull the trigger.

36. Apply the bandage to the wound. Bring the bandage to the wound and release the trigger.

37. Reach the assembly point and report in for the head-count.

38. Go to the assembly point by the green sign, away from the building.

39. Approach the emergency warden and speak to them.

40. Report in: give your name and say that you are safe.

41. Call the emergency services and finish the trainer.

42. Go to the landline phone.

43. Bring your hand to the object and pull the trigger.

44. Answer the dispatcher: the number, what happened, where you are, who is hurt, and any dangers. Do not hang up until you are told to.

45. The task is complete. You have successfully finished the emergency-response trainer for an industrial site.

46. The task is completed.

47. To exit the task press the Menu button.

VR Trainee Certificate

Employees will receive a VR Trainee Certificate upon successfully completing a training module.

Certificate of Completion:
Finished the module, underperformed the pass threshold
