

SMS|Host® Scheduled File Export with Curacity

Springer-Miller Systems' Scheduled File Export (SFE) provides a framework to support automated, schedulable, one-way exports of files in various formats from SMS|Host to complimentary hospitality systems.

The Curacity platform sources inspiring travel content for the world's savviest hotels – to increase direct bookings and grow their businesses.

Functionality

Acting as a protective gateway to your system, the SFE facilitates rapid and reliable access to files that a property wants to share with vendors or other external entities. Utilizing a flexibly configured scheduler, files designated for transport, either by naming convention or specific location, will be automatically forwarded to a validated set of SFTP credentials at the destination. This transmission mechanism accommodates the CSV export of a report, the output of a utility that has been run in the PMS or a file manually placed in a location for external transport.

Scheduled File Export Benefits

By employing Springer-Miller's SFE, properties gain the following benefits:

- **Security:** increased through elimination of direct/uncontrolled external access to SMS|Host
- **Protection:** reliance on SFTP ensures that all files are transported in an encrypted format
- **Reliability:** consistent and dependable delivery of data
- **Automation:** fully autonomous transport processing
- **Frequency:** scheduling ensures files are sent as expected
- **Economy:** the SFE can support multiple vendor exports from a single installation
- **Performance Safeguard:** reliance on an official export protects against unintended performance degradation

Concept of Curacity

Curacity is a next-generation data company focused on the travel sector. Their performance based content helps hotels grow incremental revenue. Their network of hotels, cruise lines, digital media brands and creators represent the most trusted names in hospitality, travel and lifestyle media.

Exported Content for Curacity

Contents

- SMS Brief Name/Address Mailing List report (R-R-3-P-B)

Frequency

- Two sets of Daily and Monthly parameters should be configured – one focusing on Arrivals and the other on Bookings. Daily Reports should be run nightly following the End-of-Day using the CSV output option. The Daily should be configured to run for “yesterday” and the Monthly with “1st Day of Previous Month” for the begin date and “Last Day of Previous Month” for the end. Daily Reports will be built one Report Batch and Monthly Reports will be built into another Report Batch, they can be added as a Task to the property’s Automated Night Audit for maximum efficiency.

Location

- The Scheduled File Export interface resides on the Legacy Interface Server and the CSV files will be placed in \HOSTPLUS\EXPORT\CURACITY\

Software and Hardware Requirements

The product is compatible with, and requires, the following:

- Current release of the SMS Product Suite
- Multi-interface Processor (see Exhibit A, Rev. 5.0, Section 3, page 8 for details)
