

Microcredentials Research

Targeted learning
for specific skills

Microcredentials are used as tools to support pathways into learning, pathways during learning, and instruments for lifelong learning.

We are beginning a research project to develop and implement a priority list of microcredentials in recognised areas of demand and need.

The research will initially focus on microcredentials in the childhood education and care and sport and recreation sectors.

Benefits of being involved

Your input is important and will:

- test and shape priority topics and areas of demand
- identify gaps and opportunities for microcredentials
- improve access to a range of microcredentials.

How to get involved

Please visit humanability.com.au or email us at research@humanability.com.au to sign up to learn more about the project and register for updates and consultation opportunities.
