MEASURES TAKEN FOR PREVENTION OF COVID-19 RESPIRATORY TRACT INFECTION AND OTHER COMMUNICABLE DISEASES

Children's safety is always our prior concern in the outreach service. We are taking the following measures in the dental check-ups in kindergartens to minimise the risk of COVID-19, respiratory tract infection and other communicable diseases.

We adopt infection control practice when performing outreach services. The practice includes hand hygiene and personal protective equipment.

Our dentists wear a gown, gloves, a mask and eye protection during the clinical procedures.

The dental check-up and silver diamine fluoride treatment are non-invasive, which would not cause any wounds. We do not use a rotary dental handpiece or an ultrasonic device. Thus, no aerosol is generated.

Dentists dispose of the used tools and materials after the check-up for every child to minimise the chance of cross-infection.
