

Wahed Dow Jones Islamic World ETF (UMMA)
Listed on The NASDAQ Stock Market LLC

Summary Prospectus
September 30, 2026

<https://www.wahed.com/umma>

Before you invest, you may want to review the Fund's prospectus and statement of additional information ("SAI"), which contain more information about the Fund and its risks. The current prospectus and SAI dated September 30, 2026, are incorporated by reference into this Summary Prospectus. You can find the Fund's prospectus, reports to shareholders, and other information about the Fund online at <https://www.wahed.com/umma>. You can also get this information at no cost by calling 1-855-976-4747 or by sending an e-mail request to ETF@usbank.com.

Investment Objective

The Wahed Dow Jones Islamic World ETF ("Dow Jones World ETF" or the "Fund") seeks long-term capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Shareholder Fees (<i>fees paid directly from your investment</i>)	None
Annual Fund Operating Expenses (<i>expenses that you pay each year as a percentage of the value of your investment</i>)	
Management Fee	0.65%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.65%

Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$66 **3 Years:** \$208 **5 Years:** \$362 **10 Years:** \$810

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund's performance. For the fiscal year ended May 31, 2026, the Fund's portfolio turnover rate was 11% of the average value of its portfolio.

Principal Investment Strategies

The Fund is an actively managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by investing in equity securities, including common stock and American Depositary Receipts ("ADRs"), of global companies (excluding U.S. domiciled companies) the characteristics of which meet the requirements of Shariah and are consistent with Islamic principles as interpreted by subject-matter experts (each, a "Shariah Compliant Company"). Wahed Invest LLC (the "Adviser"), the Fund's investment adviser, seeks to invest the Fund's assets in securities similar to the components of, and to achieve returns similar to those of, the Dow Jones Islamic Market International Titans 100 Index (the "Index"). The Index, a data-driven index owned and maintained by S&P Dow Jones Indices, is designed to measure the stock performance of the largest ex-U.S. companies that have passed rules-based screens for adherence to Shariah investment guidelines.

While the Adviser expects to invest in securities included in the Index, it may determine to invest in different securities or in the same securities but at different times or in different weights than included in the Index when it believes doing so is more consistent with

requirements of Shariah, or otherwise in the best interests of the Fund. Under normal circumstances, the Fund will invest at least 80% of its net assets, plus borrowings for investment purposes, in the securities of companies domiciled in countries classified as developed market (excluding U.S. domiciled companies), emerging market, or frontier market with characteristics that are determined to be compliant with Shariah principles and/or in investments that provide exposure to such companies.

The Fund may invest without limit in issuers in both developed and emerging markets, including frontier markets. Frontier market and emerging market countries are those countries with low- and middle-income economies, respectively, as classified by the World Bank, or included in any of the Morgan Stanley Capital International (“MSCI”) frontier markets or emerging markets indices.

Because Islamic principles preclude the use of interest-paying instruments, the Fund’s cash reserves do not earn income.

Dow Jones Islamic Market International Titans 100 Index

The Index is constructed using an objective, rules-based methodology and is comprised of securities issued by companies domiciled in countries classified as developed (excluding U.S. domiciled companies), emerging market, or frontier market that are determined to be Shariah Compliant Companies based on their business activities and certain accounting-based screens, as described below. The Shariah Compliant Companies are then weighted in the Index according to their float-adjusted market capitalization.

A company that receives income in excess of 5% of its total revenue from Shariah-prohibited activities is removed from the list of companies eligible for inclusion in the Index (the “Index Universe”). Examples of such activities include:

- Conventional finance (non-Islamic banking, finance and insurance);
- Alcohol production or sale;
- Pork-related products;
- Entertainment (hotels, casinos/gambling, cinema, pornography, music);
- Tobacco manufacturing or sale; and
- Weapons, arms, and other defense manufacturing.

Only those companies in the Index Universe that pass the following accounting-based screens will be considered Shariah-compliant:

- Total debt divided by trailing 24-month average market capitalization is less than 33% of total assets;
- The sum of a company’s cash and interest-bearing securities divided by trailing 24-month average market capitalization is less than 33% of total assets; and
- Accounts receivables divided by trailing 24-month average market capitalization is less than 33% of total assets.

The top 100 Shariah Compliant Companies based on float-adjusted market capitalization are selected for inclusion in the Index. The weight of each company is capped at 10% of the Index.

Any changes to the composition of the Index will be implemented in connection with its reconstitution, which will occur annually in September. The Index will be rebalanced quarterly, in March, June, September and December. Constituents’ index weightings are calculated using closing prices on the Wednesday prior to the second Friday of the rebalancing month as the reference price. Index share amounts are calculated and assigned to each stock to arrive at the weights determined on the reference date. Changes are announced on the second Friday of the review month and are implemented at the opening of trading on the Monday following the third Friday of the review month. In addition, the S&P Dow Jones Indices LLC (the “Dow Jones Index Provider”), the index provider and calculation agent for the Index, engaged Shariah consultant, Ratings Intelligence Partners (“RIP”), to conduct ongoing monitoring of Index constituents. RIP may provide information to the Dow Jones Index Provider between quarterly rebalances. A company deemed compliant for the prior evaluation period that exceeds the maximum ratio for any accounting-based screen for the current evaluation period will continue to be considered compliant if the ratio is within two percentage points of the maximum allowed. However, if the maximum is breached for three consecutive evaluation periods, the company will be deemed non-compliant. If any of a company’s ratios are above the two-percentage point buffer limit, the company will immediately be deemed non-compliant and will be removed from the Index. A company deemed non-compliant for the prior evaluation period that passes all accounting-based screens for the current evaluation period will remain non-compliant if any ratio is within two percentage points of the maximum allowed. However, if the company satisfies all three ratios for three consecutive evaluation periods the company will be deemed compliant. If all three ratios are below the two percentage point buffer limit, the company will immediately be deemed compliant and will be eligible for inclusion in the Index.

The Index’s constituent securities also are reviewed on both an ongoing basis and annual basis by RIP to determine if any of the constituents should be considered for potential income remediation, or “Purification.” Purification is the process by which an investor donates certain income earned from his or her investment in the Fund because certain of the Fund’s investments unintentionally earned small amounts of income deemed to be prohibited by Shariah principles, such as interest income. As discussed under “Dividend Purification,” the Fund publishes on its website the per share amount to be purified on an annual basis.

As of August 30, 2026, the Index was composed of 104 constituents, representing investments in companies domiciled in 20 countries.

The Fund may, from time to time, have significant exposure to one or more sectors of the market. As of May 31, 2026, 45.9% of the Fund's net assets were invested in securities within the Information Technology Sector.

Principal Investment Risks

The principal risks of investing in the Fund are summarized below. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Shariah-Compliant Investing Risk.** The consideration of Islamic principles restricts the Fund's ability to invest in certain types of issuers and securities, such as financial companies and conventional fixed income securities (bonds and other structured securities that give a fixed return based on an obligation or promise), and reduces the size of the universe of eligible securities in which the Fund can invest. As a result, the successful implementation of the Fund's investment strategy may limit its investment opportunities and adversely affect its performance, especially in comparison to a more diversified fund. Because Islamic principles preclude investment in interest-paying instruments, any cash or cash equivalents the Fund holds will not earn interest income.
- **Equity Securities Risk.** The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Equity securities such as common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Preferred stocks are subject to the risk that the dividend on the stock may be changed or omitted by the issuer, and that participation in the growth of an issuer may be limited.
- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. In addition, government actions or interventions (including, but not limited, to the threat or imposition of tariffs, trade restrictions, currency restrictions or similar actions) as well as developments related to economic, political (including geopolitical), social, public health, market, extreme weather, natural or man-made disasters, or other conditions or events have in the past and may in the future result in volatility in financial markets and reduced liquidity in equity, credit, and/or debt markets, which could adversely impact the Fund and its investments and their value and performance. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets.
- **Market Capitalization Risk.**
 - *Large-Capitalization Investing Risk.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and, therefore, subject to slower growth during times of economic expansion. Large-capitalization companies also may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
 - *Mid-Capitalization Investing Risk.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sector and, therefore, the performance of the Fund could be negatively impacted by events affecting this sector.
 - *Information Technology Sector Risk.* The Information Technology Sector includes companies that offer software and information technology services, manufacturers and distributors of technology hardware and equipment such as communications equipment, cellular phones, computers and peripherals, electronic equipment and related instruments and semiconductors. The Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the Information Technology Sector. The prices of the securities of companies operating in the Information Technology Sector are closely tied to market competition, increased sensitivity to short product cycles and aggressive pricing, and problems with bringing products to market.

- **Semiconductors Issuer Risk.** Semiconductor companies may have limited product lines, markets, financial resources or personnel. Semiconductor companies typically face intense competition, potentially rapid product obsolescence and high capital costs and are dependent on third-party suppliers and the availability of materials. They are also heavily dependent on intellectual property rights and may be adversely affected by loss or impairment of those rights. Semiconductor companies are also affected by the economic performance of their customers.
- **ETF Risks.** The Fund is an ETF and, as a result of its structure, is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. Because securities held by the Fund may trade on foreign exchanges that are closed when the Fund's primary listing exchange is open, the Fund is likely to experience premiums or discounts greater than those of ETFs that invest in and hold only securities and other investments that are listed and trade in the U.S.
 - *Trading Risk.* Although Shares are listed for trading on The NASDAQ Stock Market, LLC (the "Exchange") and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund's underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Management Risk.** The Fund is actively managed using proprietary investment strategies and processes. There can be no guarantee that the Adviser's judgments about the attractiveness, value and potential appreciation of particular investments and strategies for the Fund will be correct or produce the desired results or that the Fund will achieve its investment objective. If the Adviser fails to accurately evaluate market risk or appropriately react to current and developing market conditions, the Fund's Share price may be adversely affected.
- **Foreign Securities Risk.** Investments in non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. These include risks of adverse changes in foreign economic, political, regulatory and other conditions, or changes in currency exchange rates or exchange control regulations (including limitations on currency movements and exchanges). The securities of some foreign companies may be less liquid and, at times, more volatile than securities of comparable U.S. companies. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Non-U.S. issuers may be subject to different accounting, auditing, financial reporting and investor protection standards than U.S. issuers. Investments in non-U.S. securities also may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. With respect to certain countries, there is the possibility of government intervention and expropriation or nationalization of assets. Because legal systems differ, there also is the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares. Conversely, Shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in the Fund more volatile and potentially less liquid than other types of investments.
- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, increased potential for market manipulation, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser's ability to evaluate local companies and impact the Fund's performance.
- **Frontier Markets Risk.** Certain foreign markets are only in the earliest stages of development and may be considered "frontier markets." Frontier financial markets generally are less liquid and more volatile than other markets, including markets in developing and emerging economies. Securities may have limited marketability and be subject to erratic price movements.

Frontier markets may be impacted by political instability, war, terrorist activities and religious, ethnic and/or socioeconomic unrest. These and other factors make investing in frontier market countries significantly riskier than investing in developed market or emerging market countries.

- **Currency Exchange Rate Risk.** The Fund may invest in investments denominated in non-U.S. currencies or in securities that provide exposure to such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of your Shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and you may lose money.
- **Depository Receipt Risk.** Depository receipts, including ADRs, involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries and changes in the exchange rates of foreign currencies. Depository receipts listed on U.S. exchanges are issued by banks or trust companies, and entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares ("Underlying Shares"). When the Fund invests in depository receipts as a substitute for an investment directly in the Underlying Shares, the Fund is exposed to the risk that the depository receipts may not provide a return that corresponds precisely with that of the Underlying Shares. Because the Underlying Shares trade on foreign exchanges that may be closed when the Fund's primary listing exchange is open, the Fund may experience premiums and discounts greater than those of funds without exposure to such Underlying Shares.

Performance

The performance information presented below provides some indication of the risks of investing in the Fund by showing the extent to which the Fund's performance can change from year to year and over time. The bar chart below shows the Fund's performance for the most recent calendar years ended December 31. The table illustrates how the Fund's average annual returns for the 1-year and since inception periods compare with those of the MSCI ACWI ex USA Index (USD) a broad-based securities market index intended to represent the overall ex-U.S. equity market. The table also shows how the Fund's performance compares to the Index, an additional measure of market performance. The Fund's past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund's website at <https://www.wahed.com/umma>.

Calendar Year Total Returns

The Fund's calendar year-to-date total return as of June 30, 2026, was 32.49%. During the period shown in the bar chart, the highest quarterly return was 13.51% for the quarter ended December 31, 2023, and the lowest quarterly return was -8.04% for the quarter ended September 30, 2023.

Average Annual Total Returns (for periods ended December 31, 2025)

	1-Year	Since Inception (1/7/2022)
Wahed Dow Jones Islamic World ETF		
Return Before Taxes	26.45%	5.63%
Return After Taxes on Distributions	26.31%	5.48%
Return After Taxes on Distributions and Sale of Shares	16.05%	4.46%
MSCI ACWI ex USA Index (USD) (reflects no deduction for fees, expenses, or taxes)	32.39%	8.18%
Dow Jones Islamic Market International Titans 100 Index (reflects no deduction for fees, expenses, or taxes)	26.16%	5.66%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and

may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account (“IRA”) or other tax-advantaged accounts.

Portfolio Management

<i>Adviser</i>	Wahed Invest LLC
<i>Portfolio Manager</i>	Samim Abedi, Chief Investment Officer for the Adviser, has been the portfolio manager of the Fund since its inception in 2022

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at <https://www.wahed.com/umma>.

Tax Information

The Fund’s distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the Adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange-traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.
