

FROM AUTHORIZATION TO OUTCOME

See more than your clients can tell you

Here is how it works. Our consent engine connects you to every digital health network at once and returns a fuller picture in minutes. Below, follow that data into the play each kind of firm runs: personal injury, mass tort, and the partners who serve them.

90%
success rate

250M+
connected individuals

5 min
to first results

20+
data networks

THE SHARED START

One consent workflow. A fuller picture, fast.

Before any firm runs their own play, every case follows the same three steps, from a single signature to structured, litigation ready data.

One consent workflow

Consent is captured once at intake and folds into your retainer. No new forms.

Networks queried

Claims, pharmacy, lab, EMR, and state exchanges, all at once.

Data back fast

Providers, codes, meds, labs, and records, structured in minutes.

WHAT COMES BACK

Provider discovery

Treating providers surfaced, an average of 45 per client across 7 to 10 years.

Codes & history

Diagnoses and procedures as ICD and CPT codes, with treatment timelines.

Medication insights

Prescriptions filled, with NDC codes, prescriber, and dispensing detail.

Lab & pathology

Blood work and pathology results from Quest and LabCorp networks.

Medical records

Operative notes, discharge summaries, and clinical detail from Epic and more.

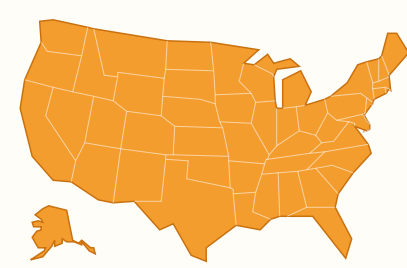

Background & identity

Prior claims, liens, addresses, and criminal history, in seconds, included.

Connected states unlock even more

When your client lives in a state with a live health information exchange, one query adds every acute care hospital statewide, including the cash pay and uninsured care that insurance data alone can miss. It strengthens both flows below.

↗ A growing list of states, with more each quarter

⊕ Coverage expanding nationwide

FROM HERE THE FLOW SPLITS BY FIRM

PERSONAL INJURY

Case by case, intake to trial

You carry one case at a time. SettlIT plugs in at every stage, so the medical picture only gets sharper as you move forward.

1 INTAKE

Validate the story

Confirm the injury and spot red flags before you spend a dollar.

2 PRE-DEPOSITION

Kill the surprises

See every provider and pre-existing condition before the defense does.

3 DEMAND

Back the number

Support your demand with a documented treatment timeline.

4 TRIAL

Walk in ready

A final check confirms nothing was missed across any facility.

WHY THIS FLOW WINS

Drop the cases that fall apart early, and never get surprised in a deposition again.

MASS TORT

Docket-wide, thousands at a time

You move whole dockets, not single cases. SettlIT runs every claimant through the same tort-specific criteria to separate the qualified from the rest.

1 CONFIGURE

Set the criteria

Lock in the exact diagnosis, procedure, and drug codes for the tort.

2 SCREEN IN BULK

Run the docket

Push thousands of claimants through in a single batch.

3 PROVE INJURY

Confirm and exclude

Claims and pharmacy confirm use, labs and state exchange records prove exposure, codes exclude the rest.

4 PROOF-UP

File with proof

Court ready proof of injury reports with signed certification.

WHY THIS FLOW WINS

Qualify thousands of claimants in days, not months, with documentation that holds up in court.

LEGAL SERVICES & CHANNEL PARTNERS

The same flow, powering every firm you serve

Plug SettlIT in as the digital health data layer behind your platform. One integration delivers the whole flow above to every firm client on your roster.
