Cybernetis - AI Platform for Business Automation

Product Overview:

How manufacturing companies with multiple brands lose $1–3M annually:
- Marketing promotes products no longer in stock.
- Production can't adjust fast enough to real demand.
- Finance and operations work on outdated, fragmented data.

Cybernetis AI unifies marketing, sales, production, and supply chain into one intelligent system - analyzing data in real time, predicting demand, and automating manual workflows, so your business runs faster, smarter, and more profitably.

Core Features:

- Automation of Processes — Streamlines workflows across manufacturing, marketing, fulfillment, finance, and supply chain.
- Forecasting Engine — Predicts demand, costs, and performance with 92% accuracy.
- Talk to Your Data — Conversational interface to query live business data instantly.
- Big Data Processing — Handles massive datasets with unmatched speed and precision.
- Digital Twin Architecture — Unifies all business systems into one intelligent control center.

Cybernetis for Fulfillment & Logistics:

Cybernetis automates carrier selection, detects delays before they happen, and minimizes returns through predictive analytics - helping you deliver faster, cheaper, and with higher accuracy.

- AI-Driven Carrier & Rate Optimization
- Proactive Delay Detection & Route Adjustment
- Automated SLA & Compliance Tracking
- Returns Prevention & Root-Cause Analysis

Figure 1: Fulfillment Performance Dashboard

Case Study - Nutraceutical Manufacturer

600 employees • 50M supplement units annually • $300M+ revenue
Before: Manual compliance checks slowed release cycles and caused costly delays.
After: +85% validation accuracy, 3 hours saved per batch, $12M+ in annual economic impact.

Cybernetis for Manufacturing:

The platform dynamically adjusts production schedules, monitors equipment health, and ensures consistent product quality in real time.

- Live OEE & Production Dashboards
- Predictive Maintenance & Downtime Prevention
- AI-Driven Quality Control
- Dynamic Production & Resource Scheduling

Figure 2: Manufacturing Performance Dashboard

Case Study – Manufacturing Company:

2 production sites • 1,300 employees • $200M annual revenue
Before: 15% of production costs lost to energy inefficiency
After: +40% forecasting accuracy, $3.8M annual savings

## Cybernetis for Marketing & Sales:

- Connects marketing and sales with all other departments across the company.
- Synchronizes demand generation, production, and logistics in real time.
- Analyzes live data to recommend the most effective marketing and sales channels.
- Automatically updates supplier, manufacturing, and warehouse plans.
- Turns every campaign into a unified growth and long-term planning system.

Case Study Result - Regional retailer
60 stores • 15K SKUs • 35 suppliers
Before: 23% forecast error, $2.1M tied in dead stock
After: +45% lead-time accuracy, $4.5M annual savings

AI-Powered Business Alerts - Predict Issues Before They Happen

By unifying all your company's data, Cybernetis monitors every operation in real time. The system detects early signals of inefficiency or risk - from supply chain disruptions to profit margin drops - and alerts your team before problems occur, not after.

Automation Engine - From Manual Tasks to Self-Running Operations

Cybernetis builds over 2,000 automation chains across departments - eliminating manual work, connecting fragmented workflows, and accelerating execution speed company-wide.

Talk to Your Data - Real-Time Insights for Every Team

- Real-Time Processing
- Ask any question, like: "Which SKU delivered the highest profit last week?"
- Role-Based Access
- AI-Driven Recommendations

Fast Integration. Results in weeks, not years

Data&Process Audit	Cybernetis Integration	System Activation
2 – 4 days	Up to 12 weeks	12–24 weeks

System Integration

Cybernetis integrates with over 80,000 technology and business solutions - ERP, CRM, WMS, manufacturing, marketing, and financial systems, among others.
Integration is done through API connections, ensuring two-way data exchange — both inbound and outbound.
If a company doesn't have an open API, our team creates a custom connector or intermediary integration to ensure full system synchronization.

Data Security and Protection

Client data security is our top priority. Cybernetis AI uses a data encryption system and multi-level access control with user role segmentation.
Every request, integration, or data transfer goes through a secured channel with continuous security monitoring.

Team Training and Support

After integration, clients undergo full onboarding and training, which includes:
- Potential team training sessions
- Educational materials and video tutorials
- Support through live chats and personal implementation manager sessions

Pricing Model

Cybernetis AI is built on a modular architecture, making its pricing model transparent and flexible.
The client chooses only the modules they actually use — with no overpayment for unnecessary functionality.

Next Step:

FREE 48-Hour Business Audit
(No commitment, no sales pitch)

We'll analyze your:
→ Orders, inventory, supplier POs, ad spend
→ Identify 3 quick-win automation opportunities
→ Calculate your potential ROI

In return you get:
✓ Risk map showing where you're losing money
✓ 3 ready-to-deploy playbooks
✓ Custom ROI projection
