Weeds

Now is the time for Kyllinga and Nutsedge to start becoming active and making their appearances. If you have the standard 8 application lawn app package with us, you will need additional treatments to get rid of these weeds as they are not included in that package. We would apply the first treatment and then follow it up with an additional treatment 14-21 days after the initial one, for the best results.

Call Now

If you have weeds outside of the broadleaf weed species, we have a solution.

With weed control being applied, as the weeds die off, you may see bare spots in your yard where the weeds once were thriving. These spots will fill in, please be patient as it does take time.

Help!

Nutsedge

Watering Schedule

We recommend you keep with your current irrigation schedule. If you do not have signs of drought stress, we recommend watering 1x a day, 5-7 days a week.

If you have signs of drought stress, we recommend watering 3x a day for 1 week, then 2x a day until the yard recovers.

Waitlist Jobs

Our current waitlist is 3-5 weeks out. Our waitlist includes anything outside of standard services. This would include mulch/rock/pine straw installation, irrigation installation, landscape lighting, clean ups, plant installations, etc.

Shrub Trimming

We started shrub trimming. If you do not have the shrub trim package with us, please call the office today to get on our list. We do not schedule this service. We go down the list and get to as many as we can each day.
