# Amazing Blades Landscaping NEWSLETTER

We have started shrub trim #2. Palm tree trimmings take place during this shrub trim. Please look at the chart above and let the office know which style trim you would prefer. If we do not have your account noted with a specific request, the crew will automatically perform a standard trim.

We started applying lawn application #5 as well. This is a complete balanced fertilizer.

## WHAT IS DROUGHT STRESS?

Drought stress occurs when lawn doesn't receive enough water to support healthy growth. Signs of drought stress include slow or no growth, discoloration or browning of the turf, thinning and patchiness, wilting and blade curling.

## HOW DO I TREAT DROUGHT STRESS IN MY YARD?

If you have hot spots, you can hand water those particular areas for 5-10 minutes. Too much watering on Zoysia turf can cause a fungus to the turf. Hand watering the areas that need more water can help to prevent the fungus from occurring.
