Active Brown Patch

Brown Patch Disease

**BROWN PATCH IS VERY COMMON DURING COOLER, WET MONTHS.**

Reduce watering time if you have active brown patch. Keeping it wet, makes it grow.

**ONCE THIS DISEASE STARTS, IT SPREADS FAST. IT FIRST APPEARS AS CIRCULAR AREAS OF BROWN AND DEAD GRASS SURROUNDED BY A NARROW, DARK RING. IN THE EARLY MORNING THE OUTER RINGS WILL BE A BRIGHT ORANGE COLOR, WHICH INDICATES THE DISEASE IS ACTIVE. ONCE THE AREA IS TREATED, IT WILL SLOWLY BEGIN TO RECOVER.**

**IF YOU DID NOT PRE-TREAT AND NEED TO TREAT AN ACTIVE AREA, REMEMBER THAT AREA WILL HAVE A HIGHER CHANCE OF WINTERKILL. BROWN PATCH MAY COME BACK IN SPRING AND THE AFFECTED AREA WILL BE SLOWER TO GREEN UP WHEN THE REST OF THE TURF IS GREENING UP IN THE SPRING.**
