

AlcoPAS™ 1000

AlcoPAS 1000 is a polyaluminum sulfate with 50% basicity and contains only trace levels of chloride, which limits the impact on the chloride-to-sulfate mass ratio (CSMR) of the treated water. The effect of the pre-hydrolysis is to reduce by 50% the amount of alkalinity consumed during the coagulation process and to lower the requirements of pH adjustment chemicals such as lime or caustic, which is very important in raw water sources of low alkalinity. It also has the effect of increasing the rate at which the coagulation step occurs, reducing the amount of coagulant required. It is certified to the NSF/ANSI/CAN 60 standard for the treatment of potable water.

Specification	Value
ALUMINA, PERCENT Al_2O_3	8.0 - 8.5
BASICITY, PERCENT	48 - 52
SULFATES, PERCENT SO_4	16.8 - 17.2
CHLORIDES	20 PPM MAXIMUM
APPEARANCE	CLEAR TO HAZY LIGHT BEIGE
SPECIFIC GRAVITY AT 60°F	1.285 - 1.300

Properties	Value
PRODUCT WEIGHT	10.71 - 10.83 LBS. PER GALLON
PH (NEAT)	2.5 - 4.5
VISCOSITY (CPS)	10 - 15 AT 23 °C

Delivery Options ¹	Pounds	Gallons
RAIL	180,000	16,705
TANK TRUCK ²	45,000	4,176
IBC TOTE	2,925	271
DRUM	585	54

¹ Not all options are available at each production location

² Tank Truck capacities can vary depending on configuration

Principal uses

- Drinking water / wastewater treatment
- Removal of suspended and dissolved matter such as organics and phosphorus
- Reduction of Chloride to Sulfate Mass Ratio (CSMR)

Safety/Handling

Observe caution when handling corrosive materials. Please consult the safety data sheet (SDS) for safety and handling precautions.

Production

With 27 manufacturing facilities across the United States, contact us for product availability.
