About Agenus

Agenus is an immunology company developing a series of immuno-oncology CPMs, heat shock protein peptide-based vaccines and immune adjuvants. These programs are supported by three separate technology platforms. Agenus' checkpoint modulator programs target GITR, OX40, CTLA-4, LAG-3, TIM-3 and PD-1. The company's proprietary discovery engine Retrocyte Display™ is used to generate fully human and humanized therapeutic antibody drug candidates. The Retrocyte Display platform uses a high-throughput approach incorporating IgG format human antibody libraries expressed in mammalian B-lineage cells. Agenus' heat shock protein vaccines have completed Phase 2 studies in newly diagnosed glioblastoma multiforme, and in the treatment of herpes simplex viral infection; the heat shock protein platform can generate personalized as well as off the shelf products. The company's QS-21 Stimulon® adjuvant platform is extensively partnered with GlaxoSmithKline and Janssen Sciences Ireland UC and includes several candidates in Phase 2, as well as shingles and malaria vaccines which have successfully completed Phase 3 clinical trials.
