

Montra Electric Last-Mile Mobility sets a new standard in green logistics with Rail Shipment of 175 Super Autos!

~ Montra Electric Champions Cost-Efficient, Low-Carbon Deliveries with this Rail Dispatch ~

~The smart initiative ensures zero waiting time for customers during the festive season.~

~ Covering over 2,000 km in less than 72 hours, this rail dispatch slashes delivery timelines while significantly cutting CO₂ emissions. ~

Chennai, September 17, 2025: Montra Electric Last-Mile Mobility has successfully dispatched **175** units of its flagship electric three-wheeler, the **'Super Auto,'** by rail from Tada in Andhra Pradesh to Siliguri in West Bengal. This marks the brand's **first bulk railway shipment**, ensuring dealerships across North and North-East India are fully stocked to meet the heightened festive season demand.

The strategic shift to rail underscores Montra Electric's commitment to sustainability and smarter logistics. Transporting the same consignment by road would have required **17–18 truck trips and 12–14 days of transit**. By consolidating the load into a single rail movement, the company reduced delivery time by **over 60%, completing the journey in under five days**, while also cutting an estimated **~15,800 tonnes of CO₂ emissions**. In addition, the move lowered overall logistics costs by **up to 30%**, eliminated customer waiting time during the festive rush, and helped ease congestion on highways.

A dedicated warehouse facility in Siliguri has been designated to hold the dispatched vehicles before distribution to dealerships, ensuring **immediate availability of Super Autos** for customers.

This initiative highlights how **leveraging India's national railway infrastructure** can reshape sustainable distribution for the EV industry, delivering **smarter, faster, and greener mobility solutions**.

Highlighting the significance of the initiative, Deependra Sharma, CEO, Montra Electric Last-Mile Mobility, said, *"At Montra Electric, sustainability is not just about our products, it is embedded in the way we work and the choices we make. By adopting smarter logistics, we have been able to significantly reduce lead times, ensuring that vehicles reach our customers faster while lowering our environmental footprint. This initiative reflects our commitment to clean mobility, operational excellence, and delivering greater value to our customers in a greener, smarter, and more efficient way."*

The Montra Electric Super Auto is a standout in the electric Last-Mile Mobility segment, offering a blend of performance, efficiency, and sustainability. With a **top speed of 55 km/h**, a **peak power output of 10 kW**, and a **customer-assured true range of 160 km**, it delivers a robust driving experience. The Super Auto comes with LED Headlights, Radial Tubeless Tyres and designed to give a spacious comfort ride for the passengers as well as driver. It's 100% metal body and Sturdy Boron steel chassis ensures enhanced durability and safety. Super Autos are currently retailed through more than 110 Montra Electric exclusive showrooms across India and are fast expanding their presence.
