Caseware Verity

Verity is the AI that works inside your engagement, not around it. Your trusted navigator to understand context, guide judgment and act with confidence.

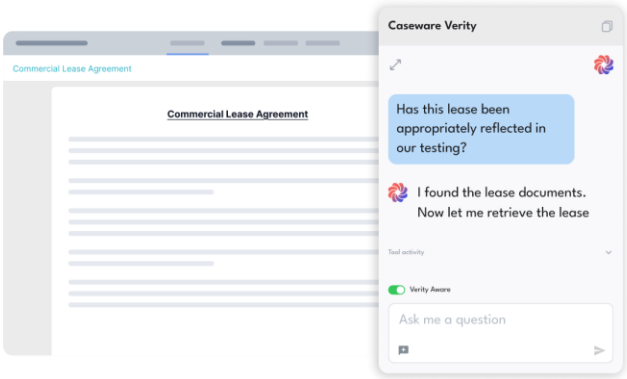

Engagement-Aware Guidance

Built directly into the audit workflow, Verity draws on your firm methodology and professional standards while connecting to your specific engagement context, so your team finds relevant answers faster and moves forward with confidence.

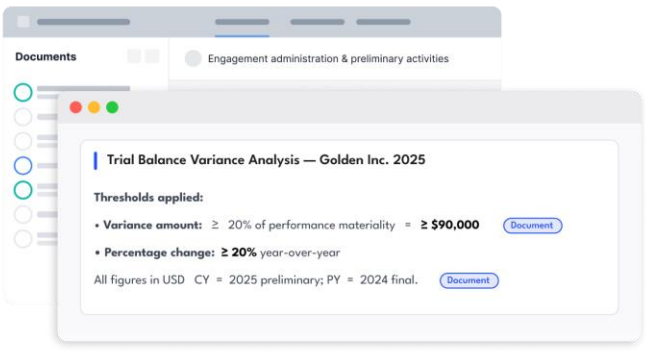

Transparent, Reviewable Outputs

Every suggestion is citation-backed, giving auditors the ability to review, refine, accept or reject before anything enters the engagement file, keeping professional judgment at the center of every decision.

Built-In Governance and Control

Operating within permissions and firm controls, your team can adopt AI without separate tools, disconnected records, or added workflow risk, with governance built in from the start.

Start using Verity today

Ask Verity	Activate Verity directly within your Caseware Cloud engagement. There is no separate tool or new login, so teams can begin working where audit work already happens.
Assess and Surface Risks	Ask Verity to identify key risks and it draws on the client's financials, prior year data, and binder to surface an engagement-specific risk summary, grounding your team in context before fieldwork begins.
Review Cited Suggestions	Generate summaries, guidance, or suggested next steps with source-backed support. Review the citations before deciding how to use each response.
Analyze Key Documents	Point Verity at board minutes, leases, or supporting documents and ask it to summarize key decisions and flag items requiring documentation, turning hours of manual review into a traceable workflow.
Apply Professional Judgement	Verity supports the auditor; it does not replace the auditor. Teams remain responsible for reviewing, adjusting, and approving AI-assisted outputs.
Verity-Assisted Review	Ask Verity to cross-reference documented risks, checklist responses, and trial balance entries before sign-off, surfacing gaps or inconsistencies before they become review notes.

107-167 hours
Total AI time savings per engagement, without losing quality

35-50%
Evidence collection

25%
AI savings in the planning stage
