

Precision Health Forecasts

Smarter spend, healthier members

Evidium delivers **measurable clinical and financial performance improvements** by forecasting the health status, care and cost of high-risk members and optimizing treatment pathways before costs escalate. Its **clinically explainable intelligence** enables precision targeting and drives improved, stable and consistent financial outcomes.

Transparent, clinically grounded forecasts

Combine real-world evidence with claims-driven modeling to forecast future clinical states and cost trajectories that outperform traditional trend-based models for high-cost conditions.

Extend the condition-care-cost framework

Model condition-driven risk consistently across all populations, extending precise medical insights upstream into pricing and portfolio strategy for more proactive risk management.

Actionable member precision

Projects at the member level to drive proactive, timely actions including care management outreach, pathway alignment and benefit optimization, enabling maximum impact.

Rapid Time-to-Results

Deployable in low-integration or API-enabled models. Early insights can activate multiple levers at once, ranging from care management to UM to provider collaboration, accelerating financial impact.

Transparency

Low Code

Interoperable

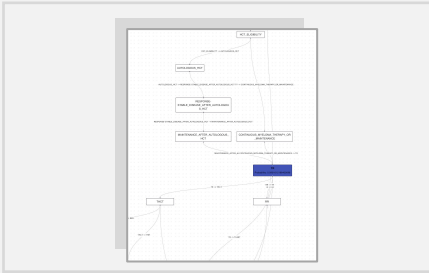

Evidence driven

Payer Grade Privacy and Compliance

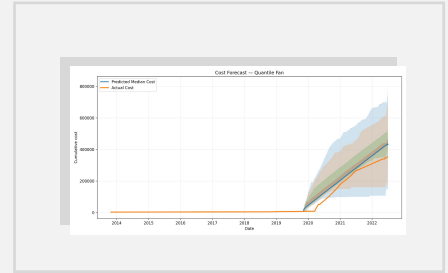

Evidium's decision-grade outputs include:

Disease specific progression and probability map

Projected cost distributions, reserve tables, stop-loss scenarios or reserve/stop loss tables

Time-phased spend projections by condition and cohort

Enabling actions that...

Target high impact members

Prioritize care management efforts

Proactively identify and manage rising-risk members to prevent avoidable clinical deterioration and costly episodes of care including readmissions and emergency visits.

Sharpen financial foresight

Improve reserve and stop-loss precision

Augment actuarial models with patient-specific condition, care and cost trajectories to improve rating / underwriting precision and reserve development for high-cost cases.

Boost revenue integrity

Improve clinical coding completeness

Surface potential missing HCCs and optimize risk adjustment accuracy tied to true disease burden and anticipated progression.

Enhance member and provider experiences

Reduce abrasion while improving care access

Streamline utilization processes to ensure members navigate care smoothly and providers face fewer administrative barriers.

Strengthen provider collaboration

Partner using shared, evidence-based insights

Establish a shared "clinical source of truth" to reduce friction in VBC arrangements, aligning treatment pathways and performance metrics through traceable, evidence-based reasoning.

Optimize specialty drug utilization

Align high-cost therapies to evidence / impact

Optimize therapy and dosing decisions to reduce unnecessary specialty spend while maintaining strong outcomes.

Evidium supports payer-led, provider-led and payvider models across care management, underwriting, actuarial and provider contracting functions.

National and Regional Health Plans | Blue Cross Blue Shield Plans | Medicare Advantage Plans | Medicaid Managed Care Plans | ACOs | Integrated Delivery Networks
