

Rising Tide Boat Works is creating a hub for marine electrification on Vancouver Island.

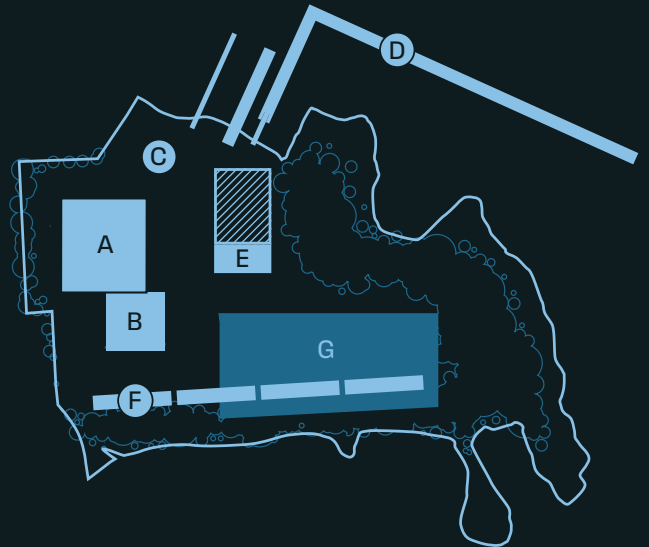

Our mission is to accelerate the transition to electric vessels by providing essential infrastructure for designers, builders, and DIYers. We have secured a waterfront lot in Ucluelet and are redeveloping the site into a facility designed to nurture innovation, foster collaboration, and support the Pacific Northwest EV boating industry.

We envision a dynamic, collaborative marine innovation space that supports a thriving marine electrification ecosystem.

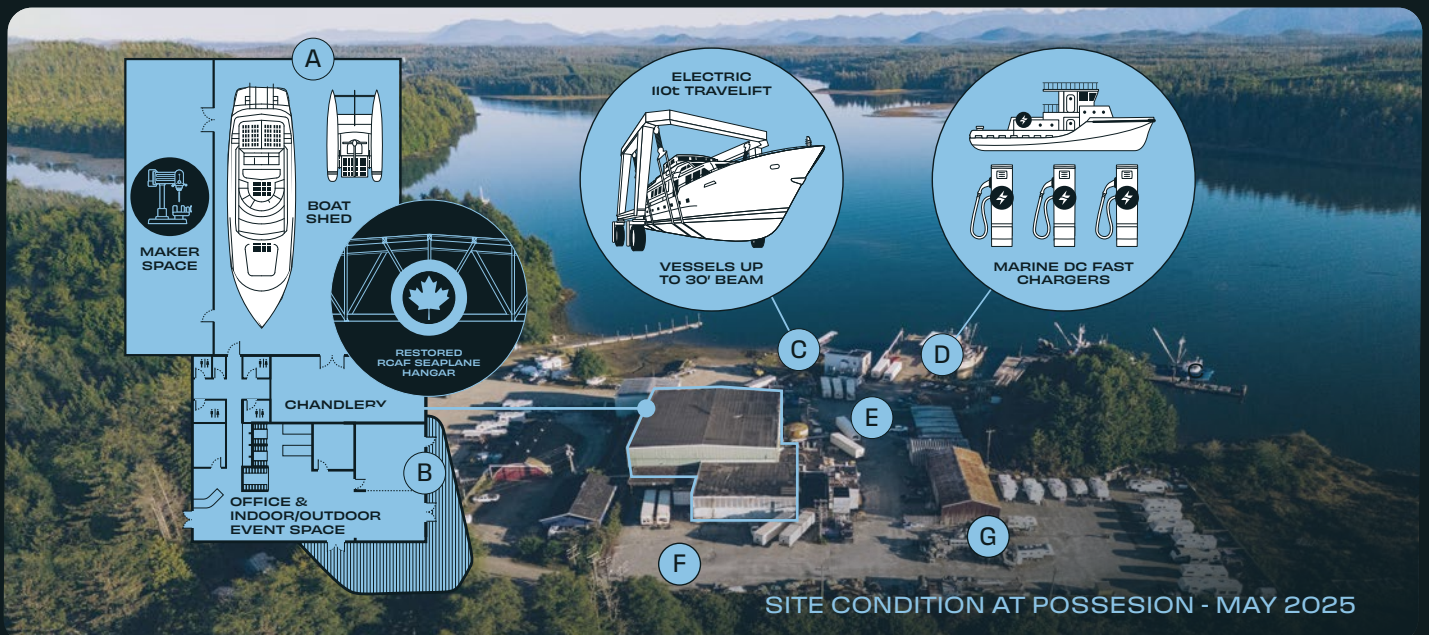

This includes not only welders and machine shops but also individuals developing new electric drive systems, designers of solar panels, experts in assembling large battery banks, and engineers converting diesel boats. We aim to attract tradespeople, professionals, researchers, technologists, and others who are already contributing to or are interested in marine vessel electrification.

Target operational date: Summer 2028

6 Acre Waterfront Industrial Lot

- A - Boat Shed, Maker Space & Chandlery (17,500 sq. ft.)
- B - Office & Event Space (4,000 sq. ft.)
- C - Haul-out Pier & Electric Travelift
- D - Solar Electrified Marina (1,000 In. ft. dock)
- E - Boat Laydown & Storage
- F - Solar Covered Parking
- G - Reserved for Future Development

SITE CONDITION AT POSSESSION - MAY 2025
