

# Quote, bill, and report on revenue — all on one adaptive platform

Turnstile brings quoting, subscriptions, billing, and revenue reporting into one platform, so nothing falls through the cracks between a closed deal and recognized revenue — and so your systems adapt as fast as your pricing does.

## WHAT WE DO

---

Turnstile is a quote-to-cash platform for sales-led B2B companies. It replaces the tangle of disconnected tools, manual invoicing, and spreadsheet reconciliation that revenue and finance teams rely on today. Pricing, terms, and billing schedules from a signed deal flow automatically into subscriptions, invoices, and reporting — one connected system of record, no manual handoffs.

### Quoting

Build and close quotes for any pricing model — flat, usage-based, tiered, multi-year, or custom — with e-sign and CRM sync built in.

### Subscription & Monetization Management

Track every subscription in one place; upgrades, downgrades, and mid-cycle changes are handled automatically.

### Billing

Generate accurate invoices automatically on any schedule, with instant proration and automated collections.

### Reporting

Real-time ARR, MRR, and audit-ready revenue recognition, always connected to your quotes, billing, and payments.

## Why teams choose Turnstile

Most billing tools were built like assembly lines — every pricing change or contract exception turns into another implementation project, and reporting drifts out of sync. The real problem usually isn't quoting or billing; it's the fragmented data underneath them. Turnstile solves that root cause by connecting the whole revenue lifecycle on a single system of record, so your data stays accurate, your team stops reconciling by hand, and you go live in minutes rather than months.

### 🎯 WHERE WE'RE HEADED

As finance and revenue teams adopt AI, they need commercial data that's complete, connected, and always accessible — something people can work around but AI agents can't. Turnstile is built to give both people and agents a single source of commercial truth, so companies can keep evolving how they price, sell, and operate without rebuilding their infrastructure.

### 👥 WHO WE'RE BUILT FOR

Finance leaders, RevOps, and revenue operators at sales-led B2B companies — especially those introducing usage-based or AI pricing, moving upmarket, or scaling revenue faster than headcount.

### HOW TURNSTILE WORKS
