

Site360 PLATFORM OVERVIEW

Scalable, Enterprise Grade,
Contractor and Compliance
Management.

A 360° COMPLIANCE SYSTEM

SAFER, SMARTER, SIMPLER.

CORE PLATFORM

ENGINEERED FOR SIMPLICITY

Software should empower your team, not complicate their day. **Site360 is built on that core philosophy.**

Providing end-to-end compliance framework for your entire organisation, across every site and every worker.

Pre-Qualification

Site Access

THE BENEFITS

Site360 **unifies** your safety ecosystem into a single, high-performance hub. **We manage the entire lifecycle of work** — automating pre-site qualification, active-work monitoring, and post-task verification — to deliver complete visibility and control.

By removing the complexity of compliance and auditing, we provide a proactive, **'always-on'** solution that secures your site while you focus on your business

OPERATIONAL BENEFITS

- **Automated Compliance:** Instantly block non-compliant workers at the point of entry. Site360 verifies licences, insurances, and inductions in real time, ensuring only authorised personnel access the site — eliminating human error from the equation.
- **Live Network Visibility:** Replace fragmented site-by-site management with a single, live Power BI dashboard. Monitor every visitor, contractor, and high-risk task across your entire portfolio in real time.

FINANCIAL BENEFITS

- **Significant Administrative Savings:** Automate the chasing of paperwork and document renewals to reduce operating costs by up to 30% and dramatically cut back-office hours.
- **Accurate Invoice Reconciliation:** Patented geo-location data verifies exact contractor time on site — creating a verifiable audit trail that eliminates billing for unverified hours.

STRATEGIC BENEFITS

- **Data-Driven Decision Making:** Turn site attendance and safety performance into actionable insights. Identify high-performing contractors, analyse bottlenecks, and optimise resource allocation across your network.
- **Scalable Risk Management:** Roll out standardised safety protocols across new sites or acquisitions rapidly, ensuring consistent governance as your business grows.

MARKET BENEFITS

- **Brand Protection & Stakeholder Confidence:** An enterprise-grade, technology-led approach to safety builds stakeholder and shareholder confidence — signalling to the market that your organisation prioritises workforce wellbeing and asset security.
- **Regulatory Resilience:** Stay ahead of health and safety legislation with a complete, immutable audit trail of every safety action and permit — enabling you to demonstrate duty of care instantly, on demand.

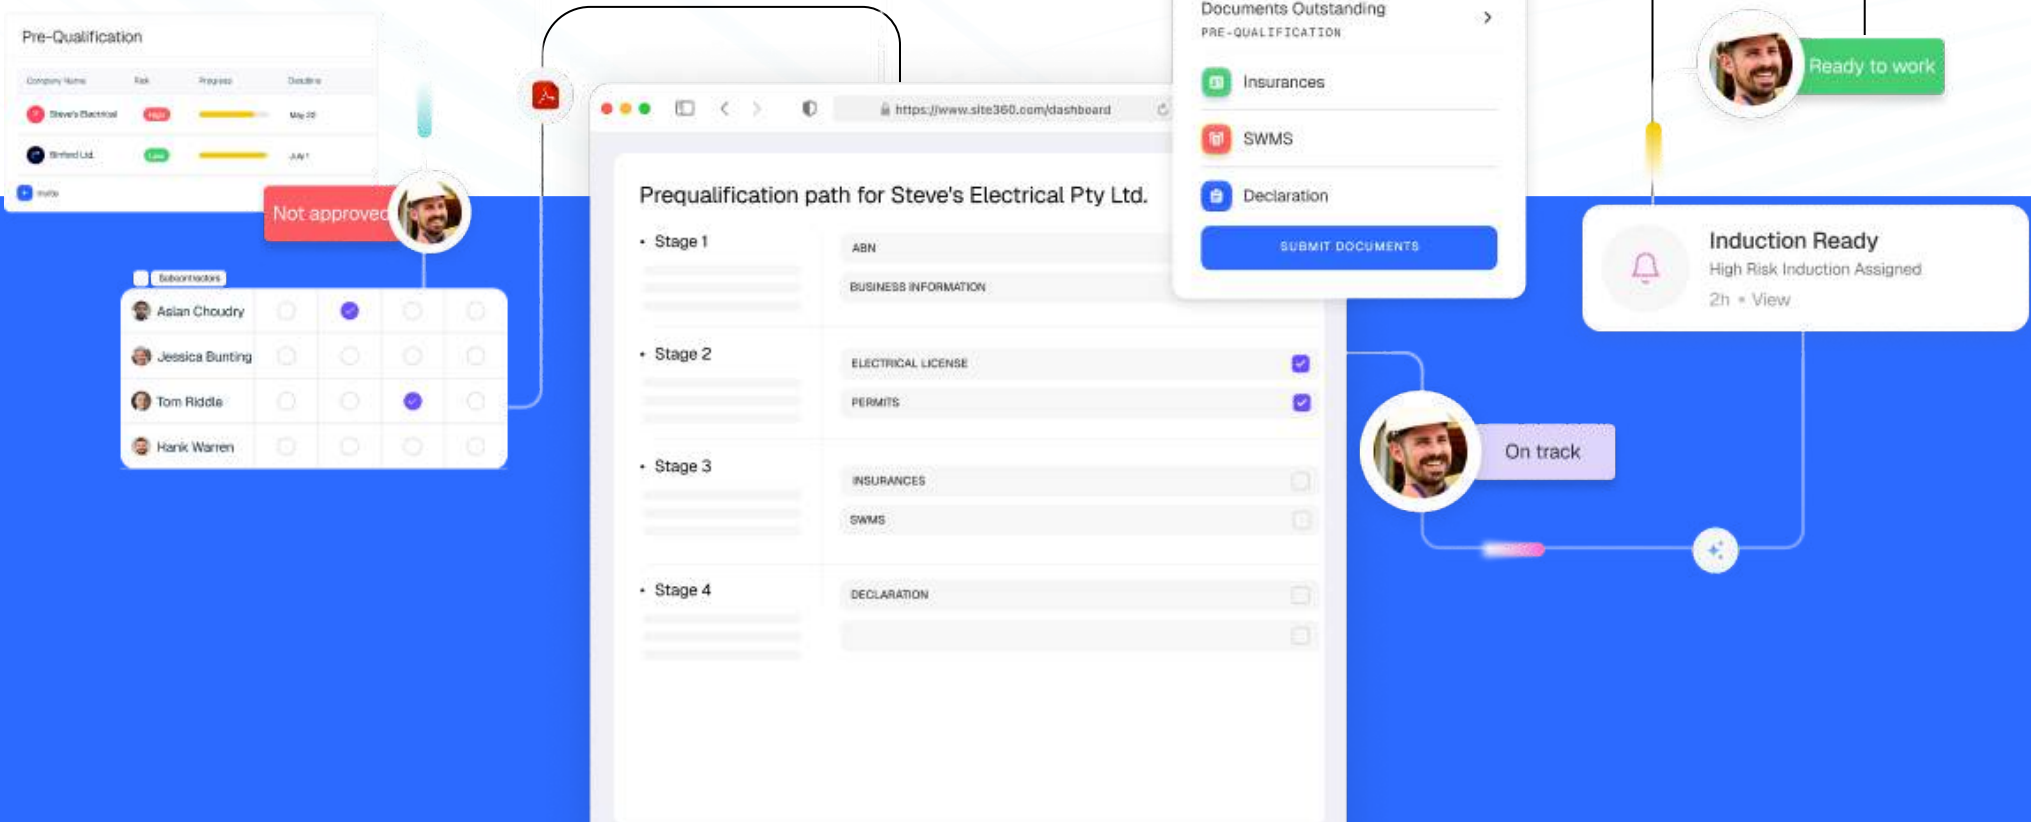

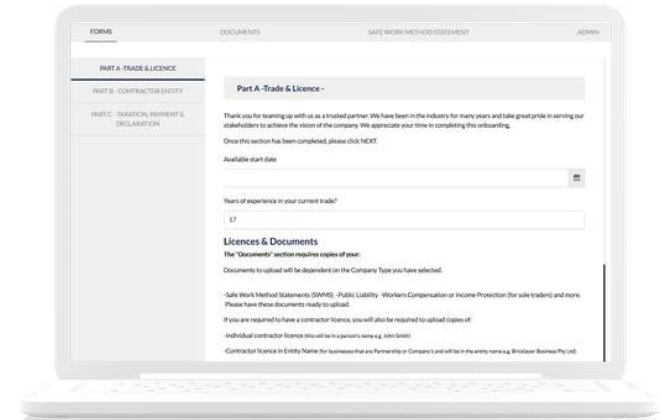

PRE-QUALIFICATION

DYNAMIC WORKFORCE SCREENING

Site360 transforms pre-qualification from a manual paperwork chase into an **automated, proactive gatekeeper**. Rather than reacting to a contractor's status at the gate, we shift verification to "Day Zero" — before work begins. By the time a worker arrives, the work of safety is already done and your residual risk effectively eliminated.

Unlike platforms that merely store documents, Site360 actively manages them. Our internal safety experts personally audit contractor **Safety Management Plans** — ensuring they aren't just present, but legislatively compliant and fit for purpose. Risk-based screening automatically scales the level of scrutiny: high-risk trades undergo rigorous auditing, while low-risk vendors move through a streamlined path, maintaining high standards without operational friction.

Behind the scenes, Site360 operates as a 24/7 monitor, across your entire supply chain. It tracks licences, insurances, and accreditations in real time, automatically prompting contractors for renewals before they lapse. If a requirement is missed, the system proactively blocks site access across your entire network simultaneously — replacing siloed spreadsheets with a **single, immutable, living audit trail** and giving you complete network governance.

ONBOARDING

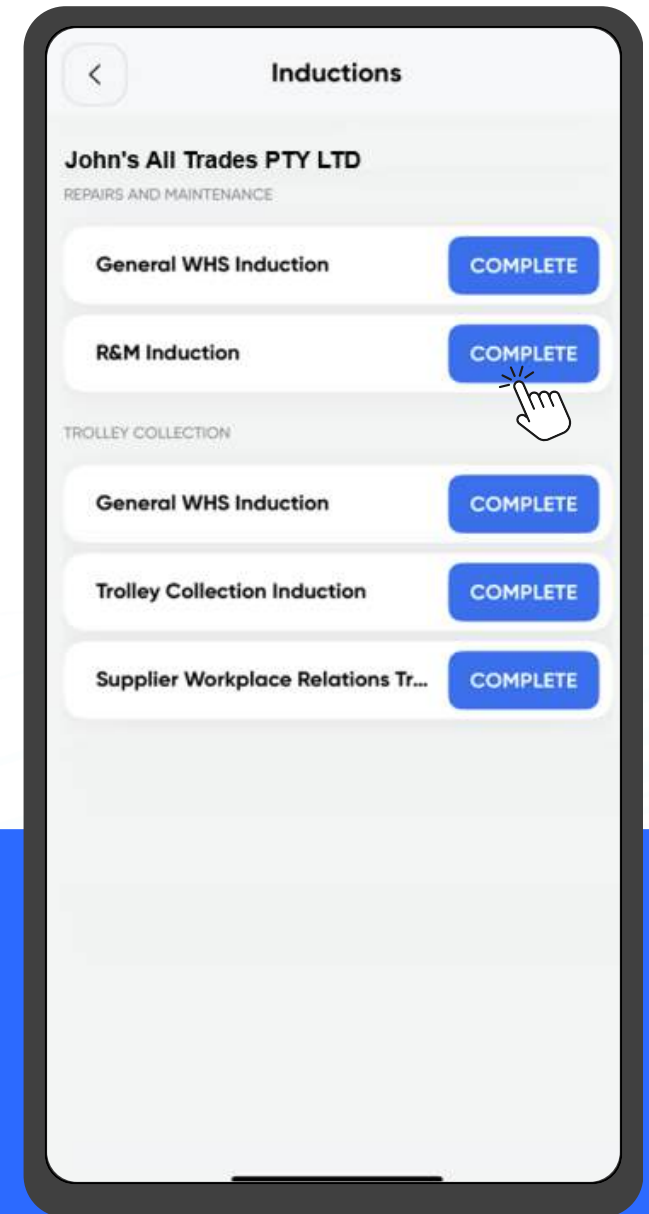

TRAINING AND INDUCTIONS

Site360 turns worker onboarding into a streamlined digital gateway. Migrate your existing training content or have our team build a bespoke training module— whichever path you choose, every worker's training history lives in one place.

Every role is different, and Site360 reflects that. Risk-based logic automatically assigns **inductions** based on role and site risk profile, **ensuring each worker receives exactly what's relevant to their job** — nothing more, nothing less.

From there, compliance manages itself. The platform tracks qualifications in real time, triggers renewal reminders automatically, and pushes required training directly to a worker's device. If a renewal is missed, site access is restricted until compliance is restored — with no manual intervention required.

SITE ACCESS

Site360 functions as your **enterprise digital gatekeeper**, enforcing second-by-second compliance **across every access point in your network**. While traditional systems might update once a day or once an hour, our platform monitors your ecosystem to the second. The moment a business license, insurance policy, or site induction expires, access is instantly revoked across your entire network. This real-time synchronization eliminates the dangerous "compliance lag" that leaves organizations exposed to liability, guaranteeing that only safe, legal, and fully verified workers ever access your sites.

When a non-compliant individual attempts to check in, the system initiates an immediate, two-way intervention. Site managers receive an instant notification, providing them with full visibility into the breach before the worker even enters the site. Simultaneously, the worker is provided with clear, automated instructions on their mobile device detailing exactly which credential has expired and the specific steps required to rectify it. This proactive workflow **turns a potential safety breach into a managed administrative task**, providing a rigorous and transparent audit trail that demonstrates unwavering due diligence at every level of your operation.

SECURITY

IN DEVELOPMENT

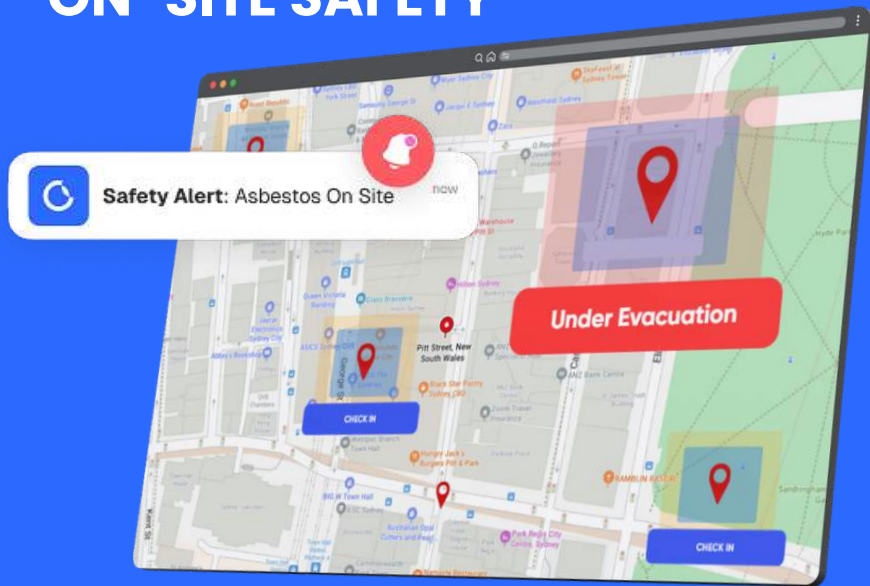

Site360's future road-map includes extending the ecosystem from the screen to the gate — engineering the bridge between digital governance and physical security. Development is moving towards an integrated smart locking solution, that moves beyond monitoring to **active, physical enforcement**. Synchronising our compliance framework with intelligent, hardware. **A "blocked" status in the software translates instantly to a locked door, gate or access point on-site.**

The moment a contractor's insurance expires or a worker's induction lapses, the command will be sent to the physical access point — no lag, no manual oversight, no margin for error. If a worker is not safe and legal at that exact moment, the hardware simply does not unlock, providing a level of liability protection that traditional key-and-logbook systems cannot match.

The smart lock will be designed for the realities of industrial and remote environments — fully waterproof, requiring no electrical hardwiring, and powered by long-life battery technology with a 10-year lifespan. No infrastructure upgrades required. This will represent the final evolution of the **Digital Gatekeeper**: a total security solution where compliance is the only key that works

ON-SITE SAFETY

Static safety protocols *react* to incidents after they happen. **Site360 prevents them before they do.**

Our agile platform delivers live hazard alerts, environmental updates, and entry conditions directly to workers in the field — ensuring second-by-second awareness across your entire network. When it matters most, our Global Evacuation feature allows management to trigger site-wide alerts from anywhere in the world, with a live mobile roll call confirming every worker's safety in real time. Workers can also report incidents and hazards instantly from their mobile device, ensuring nothing goes unlogged and every signal reaches the right people without delay.

Behind the scenes, Site360's automated Risk Flagging engine continuously monitors for non-compliance and unsafe behaviour, feeding into a sophisticated scoring framework that benchmarks safety performance, process integrity, and task completion across every site. The result is a shift from reactive incident management to proactive risk prevention — giving leadership the intelligence to act before issues escalate.

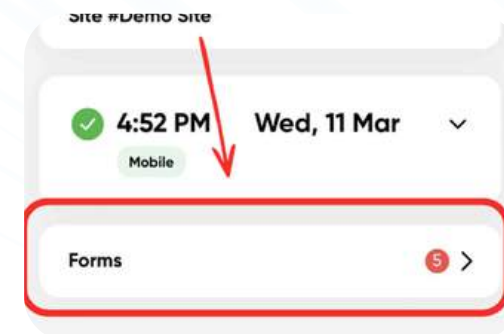

Every identified risk is tracked and resolved through the Close-out Module — a centralised hub for investigating, managing, and documenting incidents. Every resolution is recorded in a complete, immutable audit trail, providing the definitive proof of due diligence your organisation needs when it counts most.

DIGITAL FORMS & DOCUMENTS

Site360 migrates **your entire paper trail into a dynamic digital library**, customized for the specific needs of your business. This includes operational Forms—such as pre-starts, checklists, and incident reports—alongside critical Documents like Asbestos Registers, Safety Data Sheets (SDS), and floor plans.

To ensure maximum field efficiency, our system utilizes "Contextual Delivery." Documentation is siloed so that workers only see the forms and registers relevant to their specific site and professional role. This eliminates information fatigue and ensures your teams are working with the most current, site-specific data available.

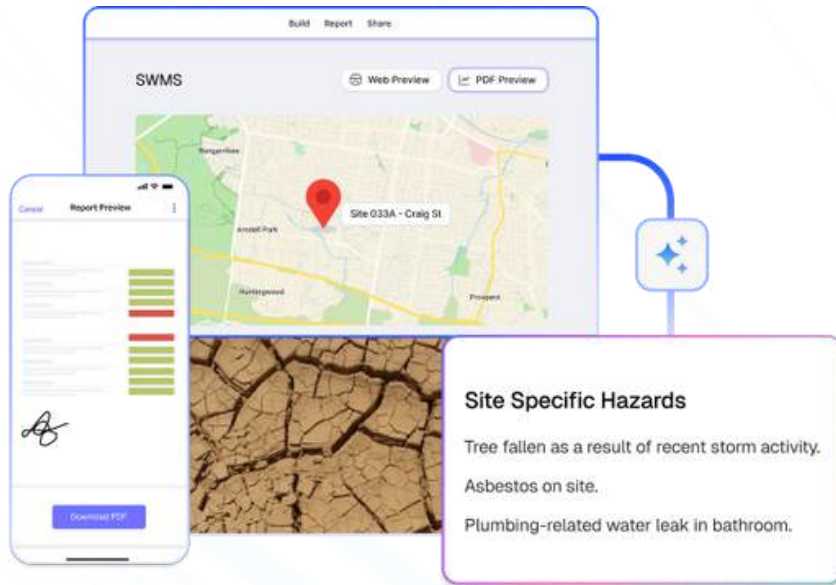

WORK AUTHORITY FORMS

EWAfs act as your **digital Permit to Work** system, replacing manual paperwork with a dynamic, real-time approval workflow. The platform provides a definitive digital gatekeeper for site activity, ensuring no contractor begins a task without explicit, documented authorisation.

Authority processes are calibrated to the risk profile of the work. For routine, low-risk tasks, the workflow is designed to be seamless and rapid, maintaining operational momentum. For high-risk activities, the system enforces a more rigorous path — requiring more information and evidence before work authority is granted. **Every task is held to the standard its risk demands**, nothing more and nothing less.

SWMS

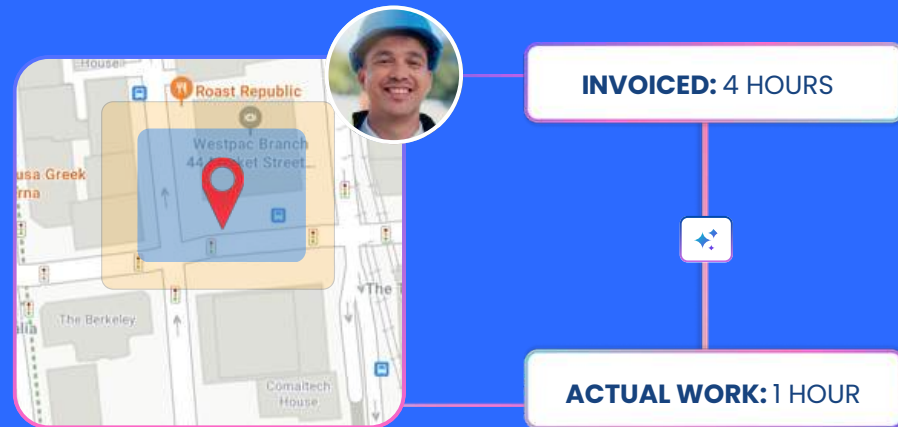

Regulatory bodies — from Safe Work Australia to state-based WHS authorities — expect SWMS documentation to be present, accessible, and genuinely specific to the site and task. **Site360 automates that entire requirement.**

Digitise your existing documents or enlist us to create a template and compliant framework from scratch. **Every SWMS is stored centrally, version-controlled, and always current.**

The platform automatically provides **SWMS that match the specific hazards and conditions of each location** — ensuring the right document reaches the right worker every time, without manual intervention. Before work begins, contractors digitally acknowledge the relevant SWMS from their mobile device. Every acknowledgement is timestamped and logged, creating a complete audit trail of every version, update, and sign-off — giving your organisation immediate, documented proof of compliance whenever it's needed.

FRAUD PREVENTION & COST REDUCTION

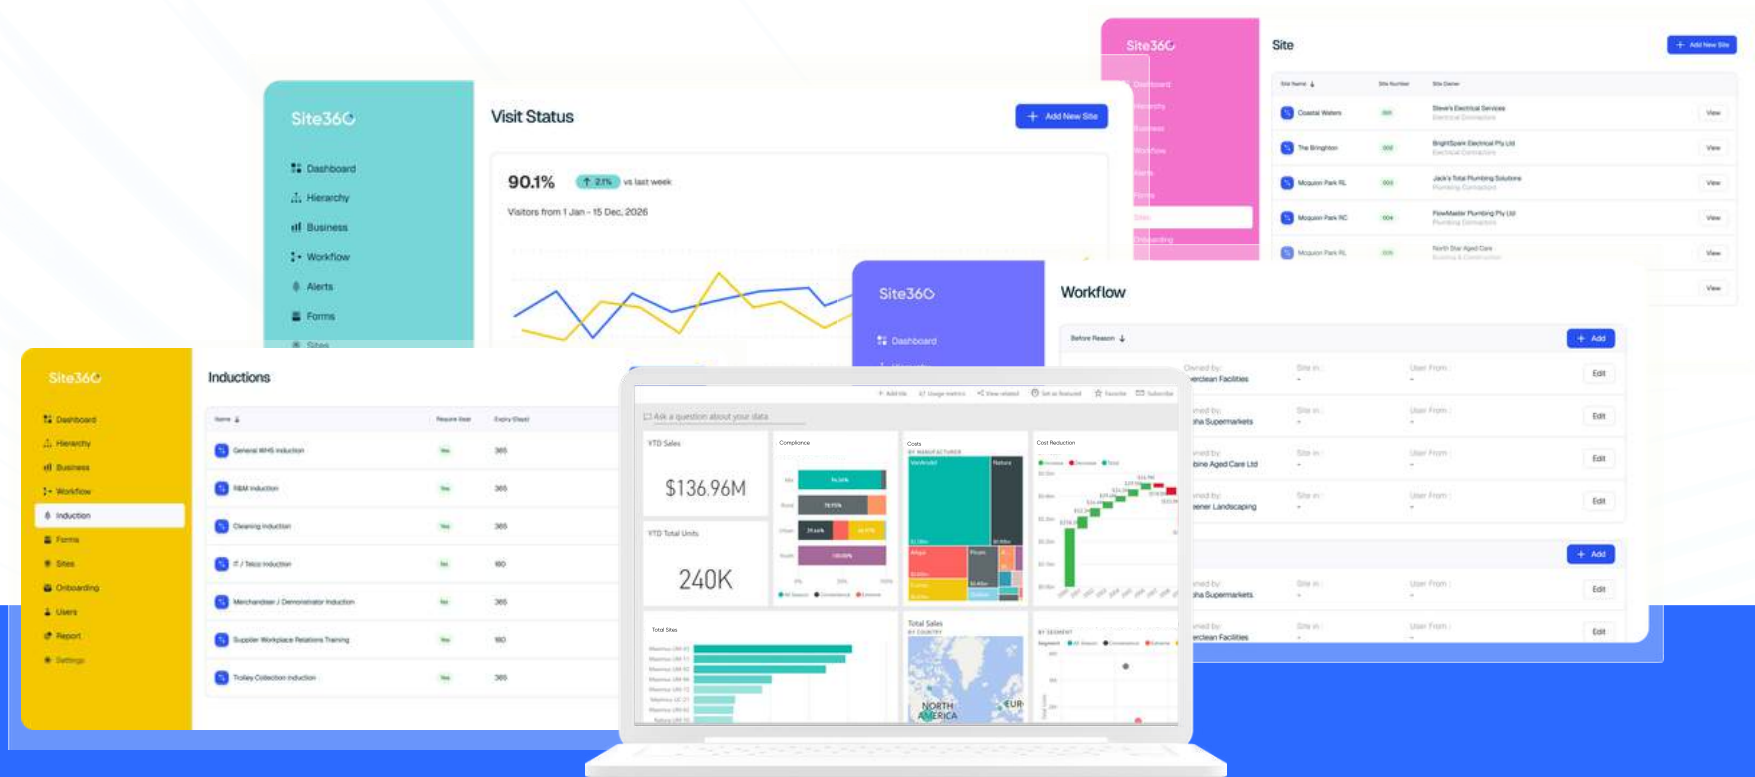

One of the largest hidden costs for any enterprise is the **gap between what contractors bill and the time they actually spend on-site**. Most organisations have no reliable way to challenge these discrepancies — so they simply pay them. **Site360 changes that.**

Unlike competitors still relying on QR code sign-ins — a method that is easily manipulated and impossible to verify — Site360 uses patented geo-fence technology to record the exact moment a worker enters and leaves a site. This eliminates the honesty system and replaces it with an undeniable, second-by-second record. There is no ambiguity, no room for dispute, and no opportunity for the billing inflation or ghost hours that plague paper-based and manual systems.

This precision gives your team the ability to verify every invoice against actual physical presence. For our large-scale clients, this single capability has uncovered significant systemic overcharging — recovering millions of dollars by ensuring they only ever pay for work that was actually performed. Every dollar spent is backed by verified, on-site activity.

REPORTING

Site360 Reporting provides **complete visibility and deep analytics across your entire network** — whether you manage a handful of local assets or a complex global portfolio. Every vital data point, including visit logs, worker identity, site-specific inductions, and real-time vendor compliance, is aggregated into a single, centralised overview. No fragmented emails, no manual spreadsheets, no blind spots.

Through our optional Power BI integration, we custom-build dashboards tailored to your specific business needs. **If the data exists, we can turn it into a high-impact report** — allowing you to filter down to a granular level and move beyond basic operational tracking into genuine strategic analysis. Over time, this creates an unmatched risk intelligence capability. Patterns that would never surface in a spreadsheet become clearly visible — recurring non-compliance from specific vendors, sites with disproportionate incident rates, seasonal workforce risks, and emerging regulatory exposures.

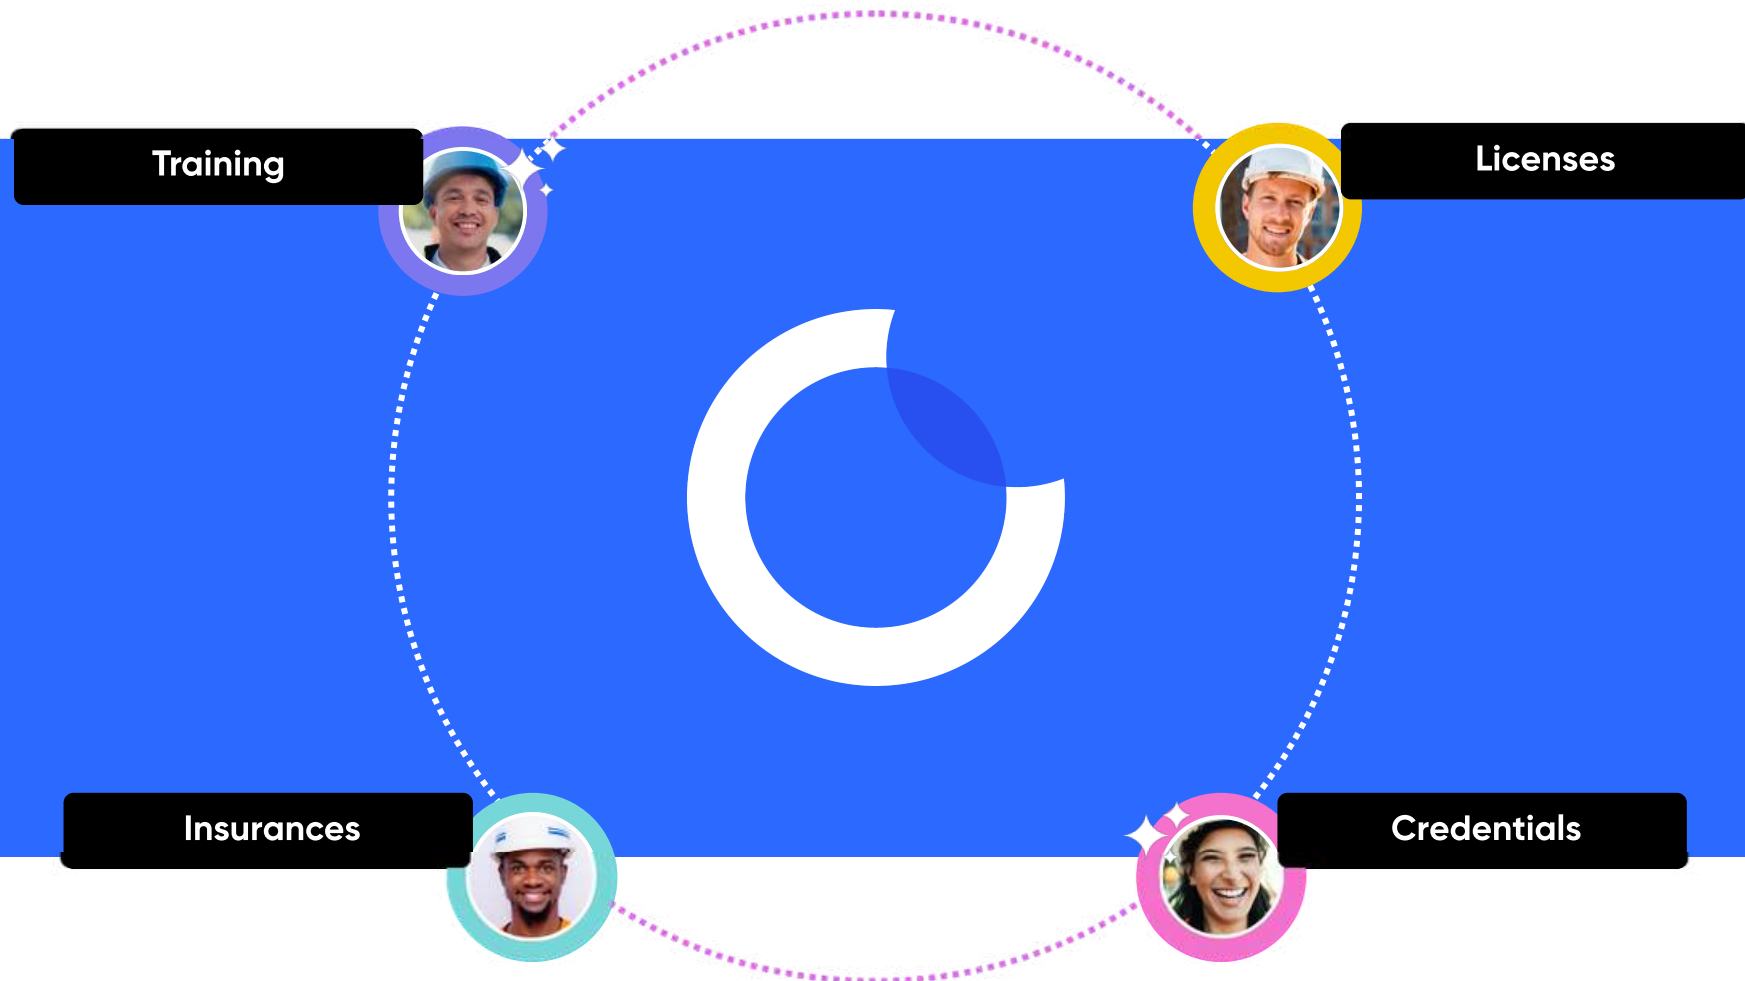

By identifying these trends early, your organisation can intervene before they escalate, building a risk management framework that is genuinely predictive rather than reactive. That level of foresight translates directly into business stability — reducing liability exposure, strengthening insurer and stakeholder confidence, and providing the secure operational foundation that long-term strategic planning demands. The result is a single, immutable source of truth across your entire site network — giving leadership the confidence that every decision is backed by verifiable data, and every risk is visible before it becomes a problem.

COMPLIANCE

Site360

Your workforce is only as secure as the data behind it. **Site360 gives every worker a verified digital identity** — a living, real-time profile of their licences, certifications, and completed inductions that follows them across every site in your network. No more manual credential checks. No more assumptions. Every qualification is verified, every induction is logged, and every profile is instantly accessible to the stakeholders who need it — at the gate, in the boardroom, or during an audit.

Site360 connects individual compliance to your broader contractor governance framework. As workers move across your network, their profiles synchronise automatically with the Admin Centre — ensuring that every person and every organisation they represent is fully vetted before a single task begins. **Compliance isn't checked once and forgotten. It's enforced continuously**, at the individual level, across your entire operation. The organisations that win on safety don't rely on spreadsheets and good faith. They build systems where compliance is structural. Site360 is that system.

FREQUENTLY ASKED QUESTIONS

DOES SITE360 TRACK USERS 24/7?

No. Once you have checked out the app will not track your location. If you forget to check out the auto check out feature will be activated within 2.5 minutes from when you leave a site zone. Once you have checked out the app it will not check for your location unless you open the app and attempt to check in. If you do not check in, the app will not record your location. You will only be able to check in when you are within a designated site zone.

IS THERE A "PICK-AND-CHOOSE" PRICING MODEL

Site360 is an all-in-one platform, and while our base subscription includes the **full suite** of contractor management and compliance tools, you can choose to deploy only the features you need.

This fixed-base pricing ensures you have a scalable, end-to-end solution ready for future growth; as such, costs cannot be reduced by electing fewer features. Please note that while standard reporting is included, Power BI reporting and upcoming Security hardware modules (currently in development) are available as premium add-ons.

HOW MANY SITES CAN WE HAVE?

Site360 offers ultimate scalability with no limit on the number of sites you can onboard. Our platform is designed to grow with your organization, ensuring that every single location—regardless of volume—benefits from full workflow automation, site-specific compliance controls, and integrated reporting. This ensures consistent oversight and data integrity across your entire national or global footprint from day zero

IS PRE-QUALIFICATION OPTIONAL AND DOES THIS AFFECT PRICE?

Yes. While Site360 is an end-to-end solution, you may elect to manage the pre-qualification process in-house using our platform tools. This allows you to focus strictly on site access, safety logs, and real-time attendance tracking. Please note that while this reduces service fees, internal management requires significant administrative resources to accurately interpret regulatory shifts and maintain up-to-date verification of licenses and insurances across your entire workforce.

WHY CHOOSE Site360

 **290%**
Improvement in incidents captured

8x 
Greater visibility and control

 **Up to 90%**
Return on initial investment

Up to 80% 
Improved compliance

OUR DIRECTOR'S MESSAGE

“

Our number-one priority is to ensure the safety and wellbeing of all our residents. Site360 enables us to identify and intervene if an unapproved visitor arrives at a residence. Attendance information shows who's onsite now, who has visited historically, how long they stayed, and why they were there.

Stephen
Anglicare

“

In Woolworths, our Facilities Management team is aspiring to be a data driven business, gathering data from multiple sources, connecting this data to processing platforms, and making sense of it to make better decisions. And Site360 is enabling us to do this.

Rob Crossman
Woolworths

“We don't ask your team to do more; we automate what they're currently struggling to do manually. Site360 scales your capacity without scaling your headcount.”

— Steve Jenke, Director of Site360
