Solid Surface

Material
Solid Surface

Solid Surface is a mineral-based material combined with acrylic resin, known for its homogeneous appearance and silky touch, allowing the creation of monolithic designs without visible joints. It stands out for its non-porous, repairable and easy-to-maintain surface.

High-performance mineral and acrylic resin compound

Waterproof and non-porous structure

Soft and warm to the touch

Minor scratches or damage can be restored

Resistant to impacts and chemical products

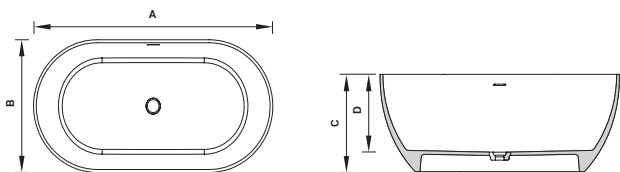

Freestanding installation

Colour
