

Remote Access and Lifting Services

ATV Operated Services

Objectives

Aurora delivered ATV-operated access services to support personnel and equipment transport in remote locations. Following successful project execution across the mainland, the team was mobilised to Northern Ireland — a region with unfamiliar terrain and complex logistics. The operation involved ferry transport and careful planning to deliver critical access solutions in support of telecoms, generator refuelling, inspections, and other remote-site activities. It was important to safely and efficiently transport personnel and equipment to remote worksites using ATV-operated access solutions.

Our Solution

- Deployment of specialist ATV units to traverse difficult terrain.
- Logistical planning for interregional transport, including ferry crossings.
- Flexible response to varying site requirements, supporting multiple disciplines such as telecoms and refuelling.

At a Glance

Challenges

The project faced challenges due to changing landscapes and unfamiliar working environments, requiring adaptable planning and on-the-ground decision-making.

Value to client

Aurora's delivery ensured the successful completion of critical tasks without delays or aborted visits — saving the client both time and cost. The ability to operate reliably in remote and challenging environments provided dependable access and prevented disruption to ongoing operations.
